

The study listed may include approved and non-approved uses, formulations or treatment regimens. The results reported in any single study may not reflect the overall results obtained on studies of a product. Before prescribing any product mentioned in this Register, healthcare professionals should consult prescribing information for the product approved in their country.

<b>GSK Medicine:</b> gE/AS01B (HZV): GSK Biologicals' recombinant Herpes Zoster (HZ) vaccine.
<b>Study Number:</b> 108494 (Zoster-003), 108516 (Zoster-011 EXT 003 Y1), 108518 (Zoster-012 EXT 003 Y2), 108520 (Zoster-013 EXT 003 Y3))
<b>Title:</b> A phase II, single-blind, randomized, controlled, multicentre vaccination study to evaluate the safety and immune response of the GSK Biologicals Zoster vaccine, gE/AS01B, and to compare 3 doses of gE with AS01B adjuvant in healthy elderly subjects, aged 60 to 69 years and 70 years and above.
<b>Rationale:</b> The purpose of this study was to evaluate the immunogenicity and safety of HZV vaccine when using different doses of glycoprotein E (gE) in different vaccination schedules and adjuvanted with AS01B. The non-adjuvanted HZV vaccine was used as control. The aim was also to evaluate the persistence of the immune response induced by the vaccine during a long term period.
<b>Phase:</b> II
<b>Study Period:</b> 108494 [Zoster-003] :14 February 2007 to 04 October 2007 108516 [Zoster-011 (EXT-003 Y1)]: 07 February 2008 to 10 July 2008 108518 [Zoster-012 (EXT-003 Y2)]: 26 January 2009 to 13 July 2009 108520 [Zoster-013 (EXT-003 Y3)]: 03 February 2010 to 14 July 2010:
<b>Study Design:</b> Single blind, randomised (1:3:3:3:3), controlled, multicentric study with 5 parallel groups. Note: staggered enrolment (in German centres only)
<b>Centres:</b> 11 centres (6 centres in Germany, 2 centres in The Netherlands, 2 centres in Sweden and 1 centre in Czech Republic)
<b>Indication:</b> Immunization of healthy elderly subjects aged 60-69 and 70 years and above against HZ.
<b>Treatment:</b> The study groups were as follows: <ul style="list-style-type: none"><li>• HZV-1 Group: subjects received 2 doses of HZV formulation 1 vaccine</li><li>• HZV-2 Group: subjects received 2 doses of HZV formulation 2 vaccine</li><li>• HZV-3 Group: subjects received 2 doses of HZV formulation 3 vaccine</li><li>• Control/ HZV-3 Group: subjects received 1st vaccination of saline and 2nd vaccination of HZV formulation 3 vaccine</li><li>• Control Group: subjects received 2 doses of unadjuvanted HZV vaccine reconstituted with saline</li></ul> The vaccines were administered by intramuscular injection in the upper deltoid site of the left arm according to a 0, 2- month schedule.
<b>Objectives:</b> To compare the cluster of differentiation 4 (CD4) T cell response to gE of HZV study vaccines at Month 3 in healthy elderly subjects of 70 years of age and older.
<b>Primary Outcome/Efficacy Variable:</b> <ul style="list-style-type: none"><li>• Frequencies of CD4 T cells with at least 2 antigen-specific activation marker (Interferon gamma [IFN-γ], Interleukin-2 [IL-2], Tumour Necrosis Factor alpha [TNF-α], CD-40 Ligand [CD40L]) to gE as determined by intracellular cytokine staining (ICS) one month after the second vaccination (Month 3) in HZV vaccine groups of subjects 70 year of age and above.</li></ul>
<b>Secondary Outcome/Efficacy Variable(s):</b> <i>Immunogenicity:</i> <ul style="list-style-type: none"><li>• Frequencies of CD4/CD8 T cells with antigen-specific IFN-γ and/or IL-2 and/or TNF-α and/or CD40L secretion/expression to gE as determined by ICS in all groups at Months 0, 2 and 3.</li><li>• Anti-gE and anti- Varicella Zoster Virus (VZV) antibody (Ab) concentrations by Enzyme-linked immunosorbent assay (ELISA) in all groups at Months 0, 2 and 3.</li><li>• Frequencies of CD4/CD8 T cells* with antigen-specific IFN-γ and/or IL-2 and/or TNF-α and/or CD40L secretion/expression to gE as determined by ICS in all groups at Months 12, 24 and 36.</li><li>• Anti-gE and anti-VZV Ab concentrations by ELISA in all groups at Months 12, 24 and 36.</li><li>• Frequencies of gE specific memory B-cells (measured by B-cell ELISPOT) in a subset of subjects at Months 0 and 3.</li></ul>
<b>Safety:</b> <ul style="list-style-type: none"><li>• Occurrence, intensity and relationship to vaccination of solicited local and general adverse events (AEs) during 7 days (Days 0-6) after each vaccination.</li><li>• Occurrence, intensity and relationship to vaccination of unsolicited AEs during 30 days (Days 0-29) after each vaccination.</li><li>• Occurrence and relationship to vaccination of all serious adverse events (SAEs) during the whole study period.</li></ul>

- Occurrence of clinically diagnosed HZ episodes during the whole study period.
  - Haematological and biochemical parameters measured at Months 0, 2, and 3.
  - Biochemical parameters (calcium, fibrinogen, Lactate Dehydrogenase [LDH], total protein and electrophoresis (globulins and albumin/globulin ratio)\*\* measured 1 week after each vaccination, and Prothrombin Time [PT] and Partial Thromboplastin Time [PTT] measured 1 week after the second vaccination, in a subset of 104 (German) subjects.
- \*CMI analyses on CD8 T cells were not performed as no detectable CD8 T cell response was measured to any of the vaccine formulation in the Zoster-003 study.
- \*\*Values for electrophoresis (globulins and albumin/globulin ratio) were not displayed.

#### **Statistical Methods:**

The analyses were performed on the Total Vaccinated cohort, Total cohort for persistence at Months 12, 24 and 36 and According-To-Protocol (ATP) cohort for Immunogenicity.

- The Total Vaccinated cohort included all subjects with a least one vaccine administration documented.
- The Total cohort for persistence at Months 12, 24 and 36 included all vaccinated subjects in the vaccination phase (Zoster-003) who were contacted at Months 12, 24 and 36 respectively. The ATP cohort for Immunogenicity included all evaluable subjects (i.e., those meeting all eligibility criteria, complying with the procedures defined in the protocol, with no elimination criteria during the study) for whom data concerning immunogenicity outcome measures were available.

#### **Analysis of immunogenicity**

Analysis of immunogenicity was performed on the ATP cohort for Immunogenicity and Total cohort for persistence Months 12, 24 & 36.

#### *Descriptive analysis:*

For cell-mediated immunity (CMI) response, descriptive statistics of the frequency of CD4/CD8 T cells secreting at least 2 activation markers in response to the gE antigen were evaluated, overall and by age cohort (60-69 YOA and  $\geq 70$  YOA), for each group at Months 0, 2 and 3. Also, the descriptive statistics on the frequency of CD4 T cells identified as secreting specific sets of 2 activation markers (IFN- $\gamma$ , IL-2, TNF- $\alpha$ , and CD40L in combination with at least 1 other cytokine, respectively) in response to the gE antigen were evaluated, overall for each group at Months 12, 24 and 36.

For B-cell memory response, descriptive statistics of the frequency of gE specific B-cell were tabulated by vaccine groups at Months 0 and 3 in a subset of subjects  $\geq 70$  YOA.

For the humoral response, seropositivity rates and Geometric Mean Concentrations (GMCs) of anti-gE and anti-VZV antibodies were calculated for each group with 95% CIs at Months 0, 2 and 3, 12, 24 and 36.

#### *Inferential analysis:*

Comparison of the CMI and humoral immune response at Month 3 between all vaccine formulations was performed using a one-way ANOVA with study vaccine as fixed effect. Multiple comparisons to control were made, according to Hsu's procedure to select the best treatment.

#### **Analysis of safety**

Analysis of safety was performed on Total Vaccinated cohort and Total cohort for persistence Months 12, 24 & 36.

The percentage of subjects reporting each individual solicited local and general symptom during the 7-day (Days 0 - 6) solicited follow-up period after each vaccination was tabulated by each treatment group, after each dose and across doses, with exact 95% CI. The same tabulations were performed for symptoms with intensity of grade 3, as well as for solicited general symptoms assessed by the investigator as related to vaccination. All solicited local AEs were assessed as causally related to the vaccination. The percentage of subjects with at least one report of an unsolicited AEs classified by the Medical Dictionary for Regulatory Activities (MedDRA) preferred term and reported during a 30-day (Days 0 - 29) follow-up period after vaccination was tabulated. The same tabulation was performed for Grade 3 unsolicited AEs and for unsolicited AEs assessed by the investigator as related to vaccination. The percentage of subjects with haematology and biochemistry laboratory values below, within or above normal ranges was tabulated by treatment group at Month 0, Month 0 and 1 week, Month 2, Month 2 and 1 week and Month 3 respectively. The percentage of German subjects with haematology and biochemistry laboratory values below, within or above normal ranges was tabulated by treatment group at Month 0 and 1 week and Month 2 respectively. The percentage of subjects with clinically diagnosed HZ episodes and with SAEs classified according to the MedDRA preferred terms, for each treatment group, were tabulated from Months 0 to 3, Months 3 to 12, Months 12 to 24 and Months 24 to 36 respectively.

**Study Population:** Male or female subjects aged 60 years or older at the time of first vaccination. Subjects were excluded if they had previous vaccination against HZ or history of HZ. Written informed consent was obtained from the subjects before study entry.

N = Total number of subjects with available results n =

Number of subjects in the appropriate category

% = Percentage of subjects based on the total number of subjects with available results

PII(W1) = 1 week Post-vaccination 2

PII(M3) = 1 month Post-vaccination 2

LDH= Lactate Dehydrogenase

**Secondary Outcome Variable(s):** Number (%) of subjects with solicited local symptoms reported during the 7-day (Days 0-6) post-vaccination period following each dose and across doses (Total Vaccinated cohort)

N= number of subjects with at least one documented dose

n/%= number/percentage of subjects reporting at least once the symptom

95% CI= Exact 95% confidence interval; LL = Lower Limit, UL = Upper Limit

Any= occurrence of any local symptom regardless of intensity grade

Grade 3 pain= pain that prevented normal activity

**Secondary Outcome Variable(s):** Number (%) of subjects with solicited general symptoms reported during the 7-day (Days 0-6) post-vaccination period following each dose and across doses (Total Vaccinated cohort)

Counting rule applied: As there were more than 30 subjects per treatment group and > 3 groups, only the 5 most frequent events in each treatment group are to be listed.

- : Implies that adverse event was not reported in the particular group or that the adverse event was reported in the particular group but did not fall within the pre-defined counting rule of 5 most frequent events for that group

Grade 3 AE= event which prevented normal, everyday activities

Related AE= event assessed by the investigator as causally related to the study vaccine

**Safety Results:** Number (%) of subjects with SAEs from Month 0 up to Month 3 (Total Vaccinated cohort)

**Serious adverse events, n (%) [n considered by the investigator to be related to the medication]**

#### Conclusion:

At Month 3, the mean of frequency of gE-specific CD4 T cell secreting at least 2 different activation markers in subjects  $\geq$  70 years of age was 2269.84 in the HZV-1 Group, 2441.95 in the HZV-2 Group, 2449.90 in the HZV-3 Group, 681.73 in the Control/HZV-3 Group and 512.55 in the Control Group.

At Month 3, the median frequencies of gE-specific CD4 T cells secreting at least 2 different activation markers in subjects  $\geq$  70 years of age was 1801.23 in the HZV-1 Group; 1722.83 in the HZV-2 Group; 1778.48 in the HZV-3 Group; 491.03 in the Control/HZV-3 Group and 388.49 in the Control Group.

During the 30-day (Days 0-29) post-vaccination period, at least one unsolicited AE was reported for 55 (33.5%), 52 (31.3%), 54 (32.7%), 41 (24.8%), 16 (29.6%) subjects in the HZV-1, HZV-2, HZV-3, Control/HZV-3 and Control groups, respectively.

During the same period, at least one Grade 3 unsolicited AE was reported for 7 (4.3%), 10 (6.0%), 10 (6.1%), 5 (3.0%) and 4 (7.4%) subjects in the HZV-1, HZV-2, HZV-3, Control/HZV-3 and Control groups, respectively. During the same period, at least one unsolicited AE assessed by the investigator as related to the study vaccination was reported for 20 (12.2%), 22 (13.3%), 24 (14.5%), 13 (7.9%) and 2 (3.7%) subjects in the HZV-1, HZV-2, HZV-3, Control/HZV-3 and Control groups, respectively.

During the Month 0 to Month 3 period, at least one SAE was reported for 2 (1.2%), 4 (2.4%), 3 (1.8%), 6 (3.6%) and 3 (5.6%)

subjects in the HZV-1, HZV-2, HZV-3, Control/HZV-3 and Control groups, respectively. Fatal SAE(s) was reported for 1 (0.6%) subject in the HZV-3 Group and 1 (0.6%) subject in the Control/HZV-3 Group.

During the Month 3 to Month 12 period, at least one SAE was reported for 11 (7.1%), 14 (8.8%), 11 (6.9%), 16 (9.9%) and 3 (6.0%) subjects in the HZV-1, HZV-2, HZV-3, Control/HZV-3 and Control groups, respectively. Fatal SAE(s) was reported for 1 (0.6%) subject in the Control/HZV-3 Group.

During the Month 12 to Month 24 period, at least one SAE was reported for 21 (14.0%), 27 (17.4%), 29 (18.8%), 25 (15.9%) and 11 (22.4%) subjects in the HZV-1, HZV-2, HZV-3, Control/HZV-3 and Control groups, respectively. Fatal SAE(s) was reported for 2 (1.3%) subjects in the HZV-1 Group, 3 (2.0%) subjects in the HZV-2 Group, 2 (1.2%) subjects in the HZV-3 Group, 3 (1.9%) subjects in the Control/HZV-3 Group and 1 (2.0%) subject in the Control Group.

During the Month 24 to Month 36 period, at least one SAE was reported for 19 (12.9%), 12 (8.2%), 25 (16.7%), 20 (12.9%), 5 (10.6%) subjects in the the HZV-1, HZV-2, HZV-3, Control/HZV-3 and Control groups, respectively. No fatal SAEs were reported during the Month 24 to Month 36 period. None of the SAEs reported during entire study period were assessed by the investigators as causally related to the study vaccination.
