

Clinical Trial Results

Clinical Trial Protocol Number	EML053774_002
Title	A randomized, stratified on age, parallel group design study to investigate the safety, tolerability and pharmacokinetics after a 60 minutes application of 4% lidocaine cream compared to EMLA® cream for local anaesthesia in 40 children in need of scheduled surgery.
Trial Phase	II
EudraCT Number	2006-005006-31
Sponsor*	Merck Sante France
Primary Objectives	To investigate the pharmacokinetics of lidocaine from 4% lidocaine cream when applied to the skin of children, as compared to EMLA cream. To evaluate the safety of 4% lidocaine cream (adverse events, local tolerability, maximal exposure), as compared to EMLA cream
Overall Trial Status	Prematurely Ended

Merck KGaA
