

## Premature termination of a Clinical Trial

**Full title of the clinical Trial:** An open, mono-centre study to investigate the effect of the local application of an anti-inflammatory agent on the concentration of different cytokines in interstitial fluid of subcutaneous adipose tissue using the open-flow microperfusion technique

**EudraCT Number:** 2007-001205-17

**Sponsor:** Medical University of Graz

**Represented by (name):** Univ.-Prof. Dr. Thomas Pieber

**Reason for premature termination of the clinical trial:**

This study was never initiated, and no subjects were recruited because the OFM-technology, that should have been used in the trial, required an update.

**Study results (if available):** none available
