

2007-003834-40:

The trial was terminated early on 20/05/2013 due to poor recruitment. Unfortunately, due to strict inclusion criteria, and unwillingness of some patients and their parents for randomization, we were unable to recruit the desired number of subjects for the study.

As we have not been able to recruit the desired number of subjects in the study, we do not have sufficient data for quantitative statistical analyses.
