

## Premature termination of a Clinical Trial

**Full title of the clinical Trial:**

**Safety and efficacy study of bosentan in progressive pulmonary sarcoidosis**

**EudraCT Number: 2007-005117-18**

**Sponsor: Medical University of Vienna, Department of Clinical Pharmacology**

**Represented by (name): Markus Zeitlinger, Assoc.Prof.Priv.Doiz.Dr.**

**Reason for premature termination of the clinical trial:**

**After a study period of two years and screening more than 150 patients only two patients of the planned 16/32 could be recruited in three clinical study sites in Vienna. Therefore, the completion of the study does not seem feasible in a reasonable period of time.**

**Study results (if available):**

**Because only two patients were recruited (one is a drop out) no further assessment of the results can be performed.**

**13. AUG. 2021**

**Date and Signature of Sponsor representative:**
