Subject

Results posting of EudraCT **2007-005893-29**; "Does ATP cause Annexin A5 targeting in the human forearm?"

Dear EMA,

On behalf of Prof. dr. G.A.P.J.M. Rongen as Principal Investigator of this study, I hereby confirm that the screening and inclusion of subjects in the clinical trial protocol: "Does ATP cause Annexin A5 targeting in the human forearm?" with EudraCT number 2007-005893-29 (favourable opinion by the Ethics Committee on Aug 8th 2014), **was never started**.

The reason for this was lack of availability of Annexin A5 (essential to measure the primary outcome of this trial).

The Declaration End of Trial Form B7 reported "Completed", but this should be "**Prematurely Ended**".

We hope this information is sufficient to finalize results posting.

With kind regards,

Arjan Nooteboom,
Research Consultant at RTC Clinical Studies
