Ricerca ed innovazione

Dear EudraCT team,

we regret to inform you that results for the trial *“INTERFERON alpha 2 (IFN alpha2) as anti-angiogenetic agent in the treatment of exudative macular degeneration: a pilot study”* (EudraCT number: 2007-007744-98, conclusion date: 13/04/2010) can not be provided due to difficulties encountered in the attempt to recover the requested information.

In fact, since the trial was carried out several years ago, the electronic version of the trial documents could not be archived, while the physical copies of said documentation are not in our possession.

Moreover, our efforts to contact the Principal Investigator and other researchers who contributed to the trial were not successful, given that:

- The Principal Investigator is now in retirement;
- The Department responsible for conducting the trial has been subjected to changes in personnel, making it extremely difficult to contact the researchers involved in the trial at the time.

We thank you for your consideration.

Sincerely,

UOC RICERCA E INNOVAZIONE
