Title: A single center trial with a randomized, double-blind, placebo-controlled phase to assess safety and efficacy of sc pasireotide in patients with dumping syndrome, followed by an open label phase on active medication.

EudraCT number: 2008-000700-84

UZLeuven Snumber: S51131

This pilot study was prematurely stopped due to a high prevalence of gastrointestinal side effects probably due to too high dosage of pasireotide sc. A commercial dose escalating study was set up.

The study results were published.

Yours sincerely,

Prof. Dr. J. Tack
