## Upload of trial results data to the EudraCT database

### RESPECT trial (ref. 2009-011078-14)

Full title: Revlimid Early Stage Poor Prognosis CLL Trial: A single arm phase II study to investigate the use of Lenalidomide in the treatment of patients with early stage CLL associated with poor prognostic factors.

The above trial terminated early on 24/11/2011 due to emerging safety concerns over the incidence of second primary malignancies in patients treated with Lenalidomide.

One participant was treated in the trial but they were withdrawn due to lack of response. It was not possible to perform any analysis of the trial's objectives and no data are available for upload on this database.
