

Protocol 2009-011455-51: Palliative treatment of ulcerated cutaneous metastases: Randomized trial between electrochemotherapy and radiotherapy.

This project aimed to recruit patients referred for treatment of cutaneous metastases. However, after the protocol not recruiting over a period of time it was concluded that it was not feasible to recruit patients due practical considerations in the carepath surrounding the patients, as well as a lack of patients fulfilling inclusion criteria.

After not recruiting any patients it was decided to consequently close the trial on 22<sup>nd</sup> Sept. 2011.
