

The study listed may include approved and non-approved uses, formulations or treatment regimens. The results reported in any single study may not reflect the overall results obtained on studies of a product. Before prescribing any product mentioned in this Register, healthcare professionals should consult prescribing information for the product approved in their country.

Study No.: 113165 (EARLY-CLINRES-004)
Title: A study to evaluate the safety and immunogenicity of a booster dose of GSK Biologicals' HIV candidate vaccine (732461) after administration of chloroquine in healthy adults.
Rationale: The aim of the study was to assess whether chloroquine had an effect on the CD8+ T cell response to a booster dose of HIV vaccine in subjects recruited amongst CD4+ T cell responders who received 2 primary HIV doses in the PRO-HIV-005 (108706) study. The study also aimed at evaluating the safety of a booster dose of HIV vaccine.
Nivaquine® (chloroquine) from Aventis Pasteur (formerly Sanofi Pasteur)
Phase: II
Study Period: 07 December 2009 - 04 October 2010
Study Design: Open-label, randomised study with 2 parallel treatment groups.
Centres: 1 centre in Belgium
Indication: Immunisation against HIV in healthy adults.
Treatment: The treatment groups were as follows: <ul style="list-style-type: none"> • HIV-CQ Group: Subjects received a single dose of chloroquine, 2 days before a booster dose of the HIV vaccine. • HIV Group: Subjects received a booster dose of the HIV vaccine. The HIV booster dose was given intramuscularly in the deltoid muscle of (preferably) the non-dominant arm.
Objectives: <ul style="list-style-type: none"> • To evaluate the effect of chloroquine on a specific CD8+ T-cell response to the HIV candidate vaccine at Day 14. • To evaluate the safety of a booster dose of the HIV investigational vaccine.
Primary Outcome/Efficacy Variables:
<i>Immunogenicity</i> <ul style="list-style-type: none"> • Cellular immune response to components of the study vaccine at Day 14.
<u>Criteria for assessment:</u> <ul style="list-style-type: none"> – CD8+ T-cell responder rate identified as the number of subjects with frequencies of CD8+ T-cells expressing at least 1 cytokine among Interleukin 2 (IL-2), Tumour Necrosis Factor alpha (TNF-α) and Interferon gamma (IFN-γ) equal or above the cut-off to at least 1, 2, 3 antigens and to all 4 antigens at Day 14, as determined by Intracellular Cytokine Staining (ICS).
<i>Safety</i> <ul style="list-style-type: none"> • Occurrence, intensity and relationship to vaccination of solicited local and general symptoms during a 7-day (Day 0 to Day 6) follow up period after vaccination. • Occurrence, intensity and relationship to vaccination of unsolicited adverse events (AEs) until Day 29 Post-Vaccination.
<u>Criteria for assessment:</u> <ul style="list-style-type: none"> – Occurrence, intensity and relationship to vaccination of unsolicited AEs during the 32 days (Day -2 to Day 29) follow-up period after chloroquine administration for HVCQ Group or the 30 days (Day 0 to Day 29) follow-up period after vaccination for HIV Group. • Occurrence and relationship to vaccination of serious adverse event during the whole study period. • Occurrence and relationship to vaccination of adverse event of specific interest, including Immune-Mediated Disorders (IMD) during the whole study period. • Haematological and biochemical levels at Days 0, 7, 30 and 180 (visits 1, 2, 4 and 5) in all subjects.
Secondary Outcome/Efficacy Variable:
<i>Immunogenicity</i> <ul style="list-style-type: none"> • Cellular and humoral immune response to components of the candidate vaccines at Days 0, 7, 14, 30 and 180 in all subjects.
<u>Criteria for assessment:</u> <ul style="list-style-type: none"> – Frequency of p17, p24, Negative Regulatory Factor (Nef) and Reverse Transcriptase (RT)-specific CD8+ T cells expressing IL-2 and/or IFN-γ and/or TNF-α, as determined by Intracellular Cytokine Staining (ICS). – Frequency of p17, p24, Nef and RT-specific CD8+ T cells expressing at least one cytokine/marker among IL-2,

- TNF α , IFN γ equal or above the cut-off value.
- Cytokine/marker co-expression profile of the antigen-specific CD8 $^{+}$ T cells: Frequency of p17, p24, Nef and RT-specific CD8 $^{+}$ T cells expressing IL-2 and/or TNF- α and/or IFN- γ and/or CD40L, as determined by ICS and analysed by FlowJo software or equivalent.
- Frequency of p17, p24, Nef and RT-specific CD4 $^{+}$ T cells expressing IL-2 and/or TNF- α and/or IFN- γ and/or CD40-L, as determined by ICS.
- Frequency of p17, p24, Nef and RT-specific CD4 $^{+}$ T cells expressing at least 2 cytokines including IL-2 equal or above the cut-off value.
- Cytokine/marker co-expression profile of the antigen-specific CD4 $^{+}$ T cells: Frequency of p17, p24, Nef and RT-specific CD4 $^{+}$ T cells expressing CD40L and/or IL-2 and/or TNF- α and/or IFN- γ , as determined by ICS and analysed by FlowJo software or equivalent.
- Antibody titres to p17, p24, Nef, RT and F4co (fusion protein) as measured by Enzyme-Linked Immunosorbent Assay (ELISA).

Statistical Methods:

Population

The analyses were performed on the Total Vaccinated Cohort (TVC) and the According-To-Protocol (ATP) cohort for immunogenicity.

- The Total Vaccinated Cohort included all vaccinated subjects.
- The According-To-Protocol (ATP) cohort for immunogenicity included all evaluable subjects (i.e. those meeting all eligibility criteria, complying with the procedures defined in the protocol, with no elimination criteria during the study), for whom data concerning immunogenicity outcome measures were available.

Analysis of Immunogenicity:

The analyses of immunogenicity were performed on the ATP cohort for immunogenicity.

The difference between groups in term of percentage of CD8 $^{+}$ T cell responders with T cells expressing at least one cytokine among IL-2, IFN γ and TNF α equal or above the cut-off to at least 1, 2, 3 antigens and to all 4 antigens was tabulated with standardised asymptotic 95 % confidence interval (CI).

For each treatment group, at each blood sampling time point for which results were available, descriptive statistics of the following parameters were tabulated:

For the CD8 $^{+}$ T-cell response:

- The responder rate was defined as the number of CD8 $^{+}$ T-cell responders identified with frequencies of CD8 $^{+}$ T-cells expressing at least 1 cytokine among IL-2, TNF- α and IFN- γ equal or above the cut-off to at least 1, 2, 3 antigens and to all 4 antigens and to each individual antigen. The cut-off values for the specific CD8 $^{+}$ T-cell responses were obtained based on the pre-booster responses to the different antigens/ the peptide pool spanning the complete recombinant F4 antigen.
- The magnitude was defined as the frequency of p17, p24, Nef, RT and F4co*-specific CD8 $^{+}$ T-cells expressing at least 1 cytokine among IL-2, TNF- α and IFN- γ .
- The cytokine/marker co-expression profile was defined as the frequency of p17, p24, Nef, RT and F4co*-specific CD8 $^{+}$ T-cells expressing IL-2 and/or TNF- α and/or IFN- γ and/or CD40L, as determined by ICS and analysed by FlowJo software or equivalent.

For CD4 $^{+}$ T-cell response:

- The responder rate was defined as the number of CD4 $^{+}$ T-cell responders identified with the frequency CD4 $^{+}$ T-cells expressing at least 2 cytokines including IL-2 equal or above the cut-off value to at least 1, 2, 3 and to all 4 antigens and to each individual antigen. The cut-off values for the specific CD4 $^{+}$ T-cell responses were determined as 300 (positive CD4 $^{+}$ T-cells per million CD4 $^{+}$ T-cells) in the PRO-HIV-005 study.
- The magnitude was defined as the frequency of p17, p24, Nef, RT and F4co*-specific CD4 $^{+}$ T-cells expressing at least 2 cytokines including IL-2.
- The cytokine/marker co-expression profile was defined as the frequency of p17, p24, Nef, RT and F4co*-specific CD4 $^{+}$ T-cells expressing CD40L and/or IL-2 and/or TNF- α and/or IFN- γ , as determined by ICS and analysed by FlowJo software or equivalent.

* The frequency of CD4 $^{+}$ /CD8 $^{+}$ T-cells expressing cytokines in response to the fusion protein F4co was determined by 2 different methods: by stimulating with a peptide pool spanning the F4 antigen, or by adding the individual frequencies of the CD4 $^{+}$ /CD8 $^{+}$ T-cell response to each of the 4 individual antigens (p17, p24, Nef and RT).

For humoral immune response, the following parameters were tabulated by vaccine groups for each antigen (p17, p24, Nef, RT and F4co) at each blood sampling time point for which antibody concentrations were available:

- GMCs with 95% confidence intervals (CIs).
- Seropositivity rates with exact 95% CIs.

Analysis of Safety

The analyses of safety were based on the Total Vaccinated Cohort.

The percentages of subjects reporting each solicited local and general symptom during the 7-day (Days 0 - 6) follow-up period after vaccination, were tabulated with exact 95% CI for each group. The same tabulation was performed for any grade 3 symptoms and for general symptoms assessed by the investigator as causally related to vaccination.

The percentage of subjects with at least one report of unsolicited adverse event (AE) classified by Medical Dictionary for Regulatory Activities (MedDRA) Preferred Terms and reported during the 32 days (Days -2-29) follow-up period after chloroquine administration for HIV-CQ Group or 30 days (Days 0-29) follow-up period after vaccination for HIV Group was tabulated. The same tabulation was performed for grade 3 unsolicited AEs and for AEs assessed by the investigator as causally related to vaccination. The percentage of subjects with at least one report of AEs of specific interest including IMD during the entire study period was tabulated.

SAEs were collected and summarized by MedDRA Preferred Terms through the entire study period.

For all clinical laboratory parameters, the frequency distribution of values below, within and above normal range was tabulated per group, at each time point.

Study Population: Healthy male or female subjects between, and including, 18 and 52 years at the time of the first vaccination, who had participated and completed the PRO-HIV-005 (108706) study were enrolled in the study. Female subjects of childbearing potential had to practice adequate contraception for 30 days prior to vaccination, to have a negative pregnancy test and were to continue such precautions for 2 months after vaccination. Subjects should not have any previous administration of vaccine components nor received any previous vaccination against HIV. Written informed consent was obtained from the subjects prior to any study procedure.

Unknown = Laboratory value unknown

N = total number of subjects with available results

n(%) = number(percentage) of subjects in the appropriate category

Primary Efficacy Results: For unsolicited AEs and SAEs please refer to the safety section of the document.

Secondary Outcome Variable(s): Frequency (magnitude) of CD8+ T-cells expressing at least 1 cytokine among IL-2, IFN- γ and TNF- α : Descriptive statistics (ATP cohort for immunogenicity)

N = number of subjects with available results

SD = Standard Deviation

pool_F4co = Frequency of CD8+ T-cells expressing cytokines after in vitro stimulation with a peptide pool covering the complete sequence of the F4co fusion antigen.

F4co_est = Frequency of CD8+ T-cells expressing cytokines in response to the F4co fusion protein (all antigens) was estimated by adding individual frequencies of CD8+ T-cells to each of the 4 antigens (RT, Nef, p17, p24)

PRE = Pre Dose 3, i.e. Pre-Booster Dose

PIII(D7) = Day 7 Post Dose 3

PIII(D14) = Day 14 Post Dose 3

PIII(D30) = Day 30 Post Dose 3

PIII(D180) = Day 180 Post Dose 3

Secondary Outcome Variable(s): Cytokine/marker co-expression profile of the HIV vaccine- and each antigen-specific CD8+ T cells (ATP cohort for immunogenicity)

N = number of subjects with available results

SD = Standard Deviation

POOL_F4CO = Frequency of CD8+ T-cells expressing cytokines after *in vitro* stimulation with a peptide pool covering the complete sequence of the F4co fusion antigen.

F4CO_EST = Frequency of CD8+ T cells expressing markers in response to the F4co fusion protein (all antigens) was estimated by adding individual frequencies of CD8+ T cells to each of the 4 antigens (RT, nef, p17, p24)

PRE = Pre Dose 3, i.e. Pre-Booster Dose

PIII(D7) = Day 7 Post Dose 3

PIII(D14) = Day 14 Post Dose 3

PIII(D30) = Day 30 Post Dose 3

PIII(D180) = Day 180 Post Dose 3

Secondary Outcome Variable(s): Frequency (responder rate) of CD4+ T-cells expressing at least 2 cytokines including IL-2: Number and percentage of responders to at least 1, 2, 3 and all 4 antigens (ATP cohort for immunogenicity)

N = number of subjects with available results

SD = Standard Deviation

POOL_F4CO = Frequency of CD4+ T-cells expressing cytokines after in vitro stimulation with a peptide pool covering the complete sequence of the F4co fusion antigen.

F4CO_EST = Frequency of CD4+ T-cells expressing cytokines in response to the F4co fusion protein (all antigens) was estimated by adding individual frequencies of CD4+ T-cells to each of the 4 antigens (RT, Nef, p17, p24)

GMC = geometric mean antibody concentration calculated on all subjects

N = number of subjects with available results

n/% = number/percentage of subjects with concentration within the specified range

95% CI = 95% confidence interval; LL = Lower Limit, UL = Upper Limit

PRE = Pre Dose 1
PREIII = Pre Dose 3, i.e. Pre-Booster Dose
PIII(D7) = Day 7 Post Dose 3
PIII(D14) = Day 14 Post Dose 3
PIII(D30) = Day 30 Post Dose 3
PIII(D180) = Day 180 Post Dose 3

Safety Results: Number (%) of subjects with unsolicited adverse events occurring until Day 29 post-vaccination (Total vaccinated cohort)

Most frequent adverse events - On-Therapy (occurring within the 32-day (Day -2 to Day 29) post-chloroquine administration period for the HIV-CQ Group or within the 30-day (Days 0-29) post-vaccination period for the HIV Group	HIV-CQ Group N = 13	HIV Group N = 15
Subjects with any AE(s), n (%)	8 (61.5)	13 (86.7)
Subjects with grade 3 AE(s), n (%)	3 (23.1)	2 (13.3)
Subjects with related AE(s), n (%)	5 (38.5)	8 (53.3)
Chills	1 (7.7)	6 (40.0)
Myalgia	3 (23.1)	2 (13.3)
Influenza like illness	2 (15.4)	2 (13.3)
Headache	1 (7.7)	3 (20.0)
Gastroenteritis	1 (7.7)*	1 (6.7)
Lymphadenopathy	1 (7.7)	1 (6.7)
Diarrhoea	1 (7.7)	-
Rhinitis	1 (7.7)	1 (6.7)

Oropharyngeal pain	-	1 (6.7)
Pruritus generalised	-	1 (6.7)

* 1 subject in the HIV-CQ group reported gastroenteritis 1 day before vaccination

- : Adverse event absent

Grade 3= event that prevented normal activities

Related= event assessed by the investigator as causally related to the study vaccination

Safety Results: Number (%) of subjects with serious adverse events during the entire study period (Total vaccinated cohort)

Serious adverse event, n (%) [n considered by the investigator to be related to study medication]

All SAEs	HIV-CQ Group N = 13	HIV Group N = 15
Subjects with any SAE(s), n (%) [n assessed by investigator as related]	0 (0.0) [0]	0 (0.0) [0]
Fatal SAEs	HIV-CQ Group N=13	HIV Group N=15
Subjects with fatal sae(s), n (%) [n assessed by investigator as related]	0 (0.0) [0]	0 (0.0) [0]

Conclusion:

At Day 14, the number of CD8+ T cells responders identified with frequencies of CD 8+ T cells expressing at least one cytokine among IL-2, IFN- γ , TNF- α were 1 (7.7%) in the HIV-CQ Group and 3 (23.1%) in the HIV Group.

Within 7 day post-vaccination, pain was the most frequent solicited local symptom in both groups, reported by 13 (100%) subjects in the HIV-CQ Group and 14 (93.3%) subjects in the HIV Group.

Within the 30 day post-vaccination, at least one unsolicited AE was reported for 8 (61.5%) and 13 (86.7%) of the subjects in the HIV-CQ Group and in the HIV Group, respectively. No SAEs or AEs of specific interest were reported during the study period.

No clinically relevant changes from baseline in haematology or biochemistry parameters could be observed in any of the

groups at any of the time points.
