

Premature termination of a Clinical Trial

Full title of the clinical Trial: Effects of Sildenafil on Signs and SYmptoms of Ischemia, Myocardial BlooD Flow, and Markers of ANgiogenesis in Patients with REfractory CoronarY Artery Disease (SYDNEY)

EudraCT Number: 2010-023375-26

Sponsor: Medical University of Vienna
Represented by (name): Univ. Prof. Dr. med. Christian Hengstenberg

**Reason for premature termination
of the clinical trial:**

Die SYDNEY (Sildenafil)-Studie wurde vorzeitig abgebrochen wegen zu langsamer Rekrutierung - auf Grund des umfangreichen diagnostischen Programms gaben zu wenige Patienten ihr Einverständnis (15 Patienten wurden in die Studie eingeschlossen) - eine verblindete Interimsanalyse zeigte zudem auch kein positives Signal.

Slow recruitment because of broad clinical study program, which was not accepted by the patients. An interim analysis showed neutral results, finally leading to termination of the study.

Study results (if available):
