Premature termination of a Clinical Trial

Full title of the clinical Trial: Mesacol: The effect of mesalazine on molecular pathways of cell adhesion in ulcerative colitis

EudraCT Number: 2012-002023-15

**Sponsor: Medical University of Vienna
Represented by (name): Prof. Christoph Gasche**

Reason for premature termination of the clinical trial:

The trial was discontinued prematurely because of low recruitment and expiration of study drug; 3 out of 12 patients were recruited.

Study results (if available):

Primary endpoint: difference between post-treatment and pre-treatment membranous expression of E-cadherin in inflamed mucosa, evaluated by the immunoreactivity score (IRS) ranging from 0 (no staining) to 4 (strongest staining); Mean difference: +1.3 (range: 0.5-2.0), p=0.094 (not significant) by two-tailed paired sample t-test
