Premature termination of a Clinical Trial

Full title of the clinical Trial: Mesapol: The effect of mesalazine on molecular pathways of cell adhesion in patients with colon polyps

EudraCT Number: 2012-002024-32

Sponsor: Medical University of Vienna
Represented by (name): Prof. Christoph Gasche

Reason for premature termination of the clinical trial:

The trial was discontinued prematurely because of low recruitment and expiration of study drug; 8 out of 12 patients were recruited

Study results (if available):

Primary endpoint: difference between post-treatment and pre-treatment membranous expression of E-cadherin in polyps, evaluated by the immunoreactivity score (IRS) ranging from 0 (no staining) to 4 (strongest staining); Mean difference: +1.3 (range: 0.5-2.0), $p=0.001$ (significant) by two-tailed paired sample t-test
