**Title:** Efficacy of dual antiretroviral treatment with maraviroc plus ritonavir-boosted darunavir in early rescue therapy in patients with HIV-1 infection: pilot, multicenter, randomized, controlled and open phase II clinical trial. BIMARTHE study

**Code:** 3883

**Sponsor:** Vall d'Hebron Institut de Recerca (VHIR)

**Principal Investigator:** Manuel Crespo

### **Justification of termination of the trial**

The main goal of this trial was to study the effect of antiretroviral treatment with maraviroc plus ritonavir-boosted darunavir, for early therapy of HIV-1.

Trial was discontinued since not enough recruitment of patients was achieved. Initial numbers considered 90 patients until December 2013. After an extension time until June 2015, recruitment was only 16% of that expected.

This led to anticipated closure of the study, with official date at 2016/05/05.
