

Study title: **Effect of Sativex on neuropathic pain and spasticity following spinal cord injury**

EudraCT number: **2012-005328-14**

Sponsor code: **SATIVEX-2013**

The study ended before any candidates/participants could be included in the study.

The study participants were no longer allowed to drive, as consequence, when an earlier approved subsections was redacted by the National Board of Health from the first approved study protocol (was first approved 8th of May 2013). Since participants were no longer able to drive, as they depended on, they were unable to participate in the study. The study could not be conducted, due to lack of participants, and therefore ended prematurely.

Yours sincerely,

Sven Robert Andresen
