

Concerning:

“THE ROLE OF PHAGES IN MICROBIAL GUT ECOLOGY - A STUDY OF INTERACTIONS BETWEEN ANTIBIOTICS AND THE GUT MICROBIOTA IN HEALTHY VOLUNTEERS - A PARALLEL, SINGLE-BLIND, RANDOMIZED, CONTROLLED STUDY”

EudraCT 2013-003378-28

Only partial results are available and applicable for the EudraCT database. Thus, only data on the observed AEs have been posted in EudraCT, since this trial did not have any clinical endpoints or results. The antibiotics used in the trial were merely used as “tools” to examine microbiotic changes. Thus, the results are only microbiotic changes and with no clinical outcomes.

I have attached a published articles with the trial results.

On behalf of the sponsor, Professor Peter Bytzer
