

Name of the study: **“PRE clinical mutation CARriers from families with Dilated cardiomyopathy and ACE inhibitors (PRECARDIA-INHERITANCE Study). Preventive effect of ACE inhibitor (perindopril) on the onset or progression of left ventricular dysfunction in subjects at a preclinical stage from families with Dilated Cardiomyopathy”.**

Coordinating Investigator: Philippe CHARRON

Reference (AFSSAPS/ANSM) A111101-45  
EudraCT number: 2010-023184-18

Information on the early termination of the trial

The early termination of the study is due to:

- a recruitment issue in all centres
- a lack of funding for the coming years.

12 patients have been recruited in the study [6 in France and 6 in Italy]. There is one withdrawn patient and the 11 other patients will be taken care of by their treating physician. An information letter will be sent to the patients to explain them the early termination of the study.

Due to the low number of patients recruited and analysable, the data can't be used to answer to the objective of the study.
