

Regarding clinical trial 2013-003976-11

Effects of S-1 and capecitabine in combination with oxaliplatin on the coronary artery blood flow in patients metastatic gastrointestinal tract adenocarcinoma

The study was terminated on Aug 21, 2018 due to slow accrual (only 20 subjects out of the planned 40 subjects could be accrued to the study over a time period of approximately 5 years). Therefore, trial could not be analyzed according to the study protocol, and has no results.
