**End of study part with PPI condition**

Title: Collection and characterization of gastrointestinal fluids in different populations and conditions

EudraCT number: 2014-000324-19

UZ Leuven S-number: S56879

The study involved the collection and characterization of gastrointestinal fluids in different populations and conditions. Because one of these conditions involved the intake of a proton pump inhibitor (Nexiam), that part of the study was submitted to EudraCT. However, tests involving this condition have never been initiated and, meanwhile, this part of the study has been deleted from the protocol. Since no other medication is used, the study can be considered as never initiated in EudraCT.

No study results are available.

Yours sincerely,

Prof. P. Augustijns
