---

*EudraCT 2014-001778-32*

**The study was terminated early due to the inability to recruit participants. We pre-screened 249 patients of which 206 were excluded according to our exclusion criteria. 36 patients were asked to participate – 34 declined and two patients gave their consent and were screened. Both screened patients were screen-failures as they did not comply with our inclusion criteria (prediabetes). No patients were included or given treatment and hence no results were obtained from this study.**
