

Below trial were approved but never started:

**Simplified basic immunisation after transplantation of stem cells**

Eudra CT nr 2014-005077-36

This trial was never started due to a sudden and prolonged market withdrawal of the drug that was meant to be used by the control group eg Tetanusvaccin SSI and Difteroivaccin SSI. The study could not be performed as planned by the protocol. An adjustment of the protocol was not possible without a significant change of scientific impact.

The conditions are still the same today and most likely the study need to be redesigned.
