End of trial

Title: Determination of free concentrations of paracetamol, amoxycilline and valsartan in the duodenum by using a capillary diffusion catheter

EudraCT number: 2016-002897-10

UZ Leuven S-number: S59436

A first volunteer was screened on 26-05-2017. Due to the fact that the new catheter could not be positioned in three volunteers, we decided to terminate the study. In view of the fact that the catheter could not be positioned, no medication was given to the volunteers.

The last study visit of the last volunteer took place on 14-08-2017.

There are no study results available.

Yours sincerely,

Prof. P. Augustijns
