EudraCT number	Sponsor code	Title
2017-002124-24	ROPROP	Oral Propranolol for prevention of threshold retinopathy of prematurity

Summary attachment

Details of the protocol have been published elsewhere (Bührer C, Erdevi Ö, Bassler D, Bar-Oz B. Oral propranolol for prevention of threshold retinopathy of prematurity (ROPROP): protocol of a randomized controlled trial. BMJ Open. 2018 Jul 6;8(7):e021749. doi: 10.1136/bmjopen-2018-021749. PMID: 29982217; PMCID: PMC6042594)

Approval has been granted by the regulatory authorities and ethics committees in Germany, Switzerland and Turkey.

The trial was stopped prematurely before any patients were recruited because of the COVID19 pandemic, as the lockdown did not allow for initiation of study sites, recruitment of patients, or monitoring results. Funding could not be extended for enough time to compensate for the COVID19-related delay in order to reach the calculated sample size.

Christoph Bührer, MD
