

Premature termination of a Clinical Trial

Full title of the clinical Trial: Women's satisfaction with outpatient double-balloon catheter versus inpatient dinoprostone vaginal insert for induction of labour

EudraCT Number: 2017-002978-39

Sponsor: Medical University of Graz

Represented by (name): Univ.-Prof. Dr.med.univ. Karl Tamussino

Reason for premature termination of the clinical trial:

Very slow recruitment due to Corona pandemic, since most of the patients refused randomization inpatient vs. outpatient protocol. The responsible trial doctors stopped working at our clinic. Outpatient protocol was converted into routine clinical practice.

Study results (if available): not applicable

Date and Signature of Sponsor representative:
