

Premature termination of a Clinical Trial

Full title of the clinical Trial:

Effectiveness and safety of Dimethylfumarate in patients with Palmopantar Pustulosis – a 24-week, open label, phase II trial

Wirksamkeit und Sicherheit von Dimethylfumarat bei Patienten mit Palmopantarer Pustulose - eine offene, Phase II Studie über 24 Wochen

EudraCT Number: 2017-003386-10

Sponsor: Medical University of Vienna

Represented by (name): Dr.med.univ. Valentin Hacker

Reason for premature termination of the clinical trial:

The goal of including 25 patients was not met due to a lack of patients meeting the inclusion criteria. The study's ethics approval was therefore not renewed after the initially planned end of study date and the study was terminated on 2022.11.23.

Study results (if available):

Overall 13 Patients were included in the study and received treatment with Dimethylfumarate.

Date and Signature of Sponsor representative:
