

Justification for missing results for the trial in the EU

References:

EudraCT number: 2018-004244-33

Protocol number: ATYR1923-C-002

Protocol title: A Randomized, Double-Blind, Placebo-Controlled Multiple Ascending Dose Study of Intravenous ATYR1923 in Patients with Pulmonary Sarcoidosis

An application for the above-referenced clinical trial was submitted in Germany. Following receipt of conditions from the PEI that could not be met before the initiation of the trial, the sponsor decided not to open the trial in Germany. As the study was never initiated in Germany or any other country in the EU, no results are available for the EU. The study was conducted in the USA only, and study completion (last patient, last observation) occurred on 29 June 2021. Data will be posted to Clinicaltrials.gov in compliance with US law. The study is not part of a PIP.
