

Premature ending of project

Title of the trial : "Melatonin- production and release in children and adolescent with ADHD and chronic sleep problems"

EudraCT number : 2019-000211-80

I hereby inform that the above-mentioned study has prematurely ended July 5. 2022.

There have only been included 11 patients of whom only 4 have fulfilled the complete protocol. Therefore, there will not be conducted any analyses of the results and there will be no publications from this study.

The reason for closing the project is that the sponsor is leaving the research department and it has not been possible to find a replacement.

Sincerely

Allan Hvolby
Sponsor
MD, PH.D.
