

Aarhus 8th of July 2025

Declaration of early termination of trial: Fat-reduced diet vs. bile acid binder as a treatment for bile acid malabsorption in patients with chronic diarrhoea as a late side effect after cancer treatment in the pelvic region – a randomized controlled trial, EudraCT number 2019-004600-35.

The study started 1. February 2020, with full permission from the Danish Medicines Agency. The anticipated number of patients included in the study was set to 88. After having included only 7 patients, 11 screened, we decided to terminate the study on the 1st of November 2023.
