Re: "A single-center, double-blind, randomized, 28 day, parallel-group study to evaluate the effect of inhaled ciclesonide 320 mcg twice daily versus placebo on healthcare utilization, disease progression and symptoms in patients with mild-to-moderate COVID-19" [The CIMM-COVID-19 Trial], EduraCT: 2020-002208-37

To whom it may concern,

The clinical trial 2020-002208-37 was, due to regulatory approval delays and changes in the Danish COVID-19 strategy, never initiated. No subjects were recruited, and no results are available for posting.

On behalf Prof. Charlotte Suppli Ulrik

Yours sincerely
