EudraCT – Summary attachment
Sponsor data provider name: Maastricht University

Dear EudraCT team,

We would like to post this summary attachment for the prematurely ended trial 2021-001080-24, with full title "The effect of plant stanol ester consumption on the vaccination response to a COVID-19 vaccine", and sponsor Maastricht University.

This trial was prematurely ended, since the vaccination rate of COVID-19 was higher than anticipated in the Netherlands. After a couple of months we were unable to find new participants that had not received the COVID-19 vaccination yet. Therefore, we were not able to include 100 participants for our trial that aimed to study the effects of plant stanols on the primary immune response to a COVID-19 vaccine. The trial ended on 11-01-2022 and N=32 participants were compliant and completed the trial. We are currently analyzing the data and results will follow.

Yours sincerely,

Jogchum Plat

Professor Physiology of Nutrition; with special attention for Sterol Metabolism
