

## Premature termination of a Clinical Trial

**Full title of the clinical Trial:** Investigating N-methyl-d-aspartate (NMDA) receptor alterations in major depressive disorder by brain PET

**EudraCT Number:** 2022-003279-41

**Sponsor:** Medical University of Vienna

**Represented by (name):** Univ.-Prof. Priv.-Doz. Dr Lanzenberger

### Reason for premature termination of the clinical trial:

Due to substantial construction delays in the facilities of the Department for Nuclear Medicine, radiotracer production has not been possible and is still not for the foreseeable future. Because of this, recruitment for the main study could not yet start. Therefore, the study will be terminated.

### Study results (if available):

No data have been collected for analysis, there are no results to report.
