

**Clinical trial results:**

A therapeutic confirmatory, open-label, multi-center, randomized 2 parallel groups, community-based trial studying the efficacy and safety of levetiracetam (1000 to 3000 mg/day oral tablets 250-500 mg b.i.d.) compared to sodium valproate (1000 to 2000 mg/day oral ER tablets 300-500 mg b.i.d.) and carbamazepine (600 to 1600 mg/day oral CR tablets 200-400 mg b.i.d.) as monotherapy in subjects with newly diagnosed epilepsy.

Summary

EudraCT number	2004-001339-41

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 December 2007
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 October 2007
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the effectiveness of levetiracetam (LEV) in monotherapy compared to the older antiepileptic drugs (sodium valproate (VPA-ER) or carbamazepine (CBZ-CR)).

Protection of trial subjects:

All pertinent aspects of the trial were explained and all questions answered to the satisfaction of the subject or subject's legally acceptable representative before collecting written informed consent.

The consent of both the subject and/or the legally acceptable representative were obtained for subjects under 18 years of age (i.e. in this trial, subjects of 16 years or older where legally permitted). For mentally retarded subjects, the consent of the legally acceptable representative only was obtained.

The subject was free to withdraw from the trial at any time without penalty or loss of benefits to which he/she was otherwise entitled.

Background therapy:

Not applicable.

Evidence for comparator:

Not applicable.

Actual start date of recruitment	09 February 2005
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 98
Country: Number of subjects enrolled	Austria: 64

Worldwide total number of subjects	1688
EEA total number of subjects	1427

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	19
Adults (18-64 years)	1441
From 65 to 84 years	223
85 years and over	5

Subject disposition

Recruitment

Recruitment details:

The N01175 study began enrollment in February 2005 and concluded in October 2007. Recruitment took place in 24 countries.

Pre-assignment

Screening details:

Participant flow and baseline characteristics consist of the Intent-to-Treat (ITT) population, which consists of all randomized subjects regardless of actual intake.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Levetiracetam

Arm description:

Daily dose of 1000 to 3000 mg film-coated oral tablets, 250-500 mg twice daily.

Arm type	Experimental
Investigational medicinal product name	Levetiracetam
Investigational medicinal product code	LEV
Other name	Keppra
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Daily dose of 1000 to 3000 mg film-coated oral tablets, 250-500 mg twice daily.

Arm title	Older Antiepileptic Drugs
------------------	---------------------------

Arm description:

Older AEDs consist of CBZ-CR 200 mg and 400 mg and VPA-ER 300 mg and 500 mg.

Arm type	Active comparator
Investigational medicinal product name	Valproate Extended Release
Investigational medicinal product code	VER
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Daily dose of 1000-2000 mg ER oral tablets, 300 mg and 500 mg twice daily.

Investigational medicinal product name	Carbamazepine Controlled Release
Investigational medicinal product code	CBZ-CR
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Daily dose of 600-1600 mg CR oral tablets, 200 mg and 400 mg twice daily.

Number of subjects in period 1	Levetiracetam	Older Antiepileptic Drugs
Started	841	847
Completed	639	627
Not completed	202	220
AE, serious fatal	4	3
Consent withdrawn by subject	38	36
Unknown AE	2	1
Other Reason	22	15
AE, non-serious non-fatal	50	90
Lost to follow-up	36	34
SAE, non-fatal	13	14
Lack of efficacy	35	25
SAE, non-fatal + AE, non-serious non-fatal	2	2

upper limit	1.39

Secondary: Time to first seizure comparing Levetiracetam versus older Antiepileptic Drugs based on the subset of subjects whose best recommended treatment was Carbamazepine Controlled Release

End point title	Time to first seizure comparing Levetiracetam versus older Antiepileptic Drugs based on the subset of subjects whose best recommended treatment was Carbamazepine Controlled Release
End point description:	
End point type	Secondary
End point timeframe:	
Visit 1 to End of Study (approximately 52 weeks)	

End point values	Levetiracetam	Older Antiepileptic Drugs		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	492 ^[9]	500 ^[10]		
Units: days				
median (inter-quartile range (Q1-Q3))				
median (inter-quartile range)	999 (999 to 999)	999 (999 to 999)		

Notes:

[9] - For this analysis, the value of 999 indicates Not Estimable.

[10] - For this analysis, the value of 999 indicates Not Estimable.

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Comparison groups	Levetiracetam v Older Antiepileptic Drugs

Number of subjects included in analysis	992
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.061
Method	Chi-squared
Parameter estimate	Cox proportional hazard
Point estimate	1.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.99
upper limit	1.46

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent Adverse Events (TEAEs) were recorded during the study, which began in February 2005 and concluded in October 2007.

Adverse event reporting additional description:

TEAEs consists of the Intent-to-Treat (ITT) population group, which consists of all randomized subjects regardless of actual intake.

Assessment type	Non-systematic
-----------------	----------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	9.0
--------------------	-----

Reporting groups

Reporting group title	Older Antiepileptic Drugs
-----------------------	---------------------------

Reporting group description:

Older AEDs consist of CBZ-CR 200 mg and 400 mg and VPA-ER 300 mg and 500 mg.

Reporting group title	Levetiracetam
-----------------------	---------------

Reporting group description:

Daily dose of 1000 to 3000 mg film-coated oral tablets, 250-500 mg twice daily.

Serious adverse events	Older Antiepileptic Drugs	Levetiracetam	
Total subjects affected by serious adverse events			
subjects affected / exposed	61 / 841 (7.25%)	106 / 835 (12.69%)	
number of deaths (all causes)	3	5	
number of deaths resulting from adverse events	0	0	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Brain neoplasm			
subjects affected / exposed	0 / 841 (0.00%)	3 / 835 (0.36%)	
occurrences causally related to treatment / all	0 / 0	0 / 3	
deaths causally related to treatment / all	0 / 0	0 / 1	
Breast neoplasm

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 December 2005	The purpose of the amendment was as follows: 1. To correct erroneous information such as the fax number of the Clinical Trial Manager. 2. To correct new staff functions. 3. To extend enrollment.
29 September 2006	This amendment introduced the collection of a new blood sample in order to retrieve pharmacogenomic data on SV2A. This data was to be collected in order to investigate the potential influence of specific polymorphisms in the protein on therapeutic response to LEV, CBZ-CR or VPA-ER. The analysis plan as well as the results of pharmacogenomic data are presented in this amended CSR.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
