

Clinical trial results:

An international, multicenter, randomized, open-label, safety and efficacy trial of intravenous zoledronic acid administered either once or twice yearly in children with severe osteogenesis imperfecta, a 1-year extension to CZOL446H2202

Summary

EudraCT number	2004-001666-40
Trial protocol	HU GB BE
Global end of trial date	01 May 2007

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 May 2007
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	01 May 2007
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to examine the long-term general and renal safety of once yearly or twice yearly zoledronic acid (ZOL) over a 12 month extension treatment period in children aged 1 to 17 years with severe osteogenesis imperfecta (OI) who had completed one year of treatment with either ZOL or pamidronate (PAM) in the core CZOL446H2202 study.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 August 2004
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Hungary: 7
Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	Finland: 11
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Poland: 13
Country: Number of subjects enrolled	South Africa: 7
Country: Number of subjects enrolled	United States: 41
Worldwide total number of subjects	103
EEA total number of subjects	46

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	61
Adolescents (12-17 years)	42
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 16 centres in 8 countries.

Pre-assignment

Screening details:

The study enrolled a total of 103 subjects who completed the core study (CZOL446H2202).

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study. However, the Novartis clinical trial team, data analysts and vendor personnel were blinded to the subject treatment groups until the study database was locked.

Arms

Are arms mutually exclusive?	Yes
Arm title	ZOL-ZOL once yearly

Arm description:

Subjects who received ZOL in core study received ZOL based on age and body weight in extension study. Subjects aged 3 to 17 years received 0.05 milligram/kilogram (mg/kg) of ZOL up to a maximum of 4 mg once yearly. Subjects aged 1 to less than (<) 3 years received a lower ZOL dose of 0.025 mg/kg up to a maximum of 2 mg once yearly, until they reached their third birthday when the dose was increased to 0.05 mg/kg at the next scheduled dose administration visit.

Arm type	Experimental
Investigational medicinal product name	Zoledronic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Intravenous use

Dosage and administration details:

ZOL 0.025 mg/kg or 0.05mg/kg intravenous (i.v.) infusion was administered once a year.

Arm title	ZOL-ZOL twice yearly
------------------	----------------------

Arm description:

Subjects who received ZOL in core study received ZOL based on age and body weight in extension study. Subjects aged 3 to 17 years received 0.05 mg/kg of ZOL up to a maximum of 4 mg twice yearly at 6 month intervals. Subjects aged 1 to < 3 years received a lower ZOL dose of 0.025 mg/kg up to a maximum of 2 mg twice yearly at 6 month intervals, until they reached their third birthday when the dose was increased to 0.05 mg/kg at the next scheduled dose administration visit.

Arm type	Experimental
Investigational medicinal product name	Zoledronic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Intravenous use

Dosage and administration details:

ZOL 0.025 mg/kg or 0.05mg/kg i.v. infusion was administered twice yearly at 6 months intervals.

Arm title	PAM-ZOL once yearly
------------------	---------------------

Arm description:

Subjects who received pamidronate (PAM) in core study received ZOL based on age and body weight in

extension study. Subjects aged 3 to 17 years received 0.05 mg/kg of ZOL up to a maximum of 4 mg once yearly. Subjects aged 1 to less than < 3 years received a lower ZOL dose of 0.025 mg/kg up to a maximum of 2 mg once yearly, until they reached their third birthday when the dose was increased to 0.05 mg/kg at the next scheduled dose administration visit.

Arm type	Experimental
Investigational medicinal product name	Zoledronic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Intravenous use

Dosage and administration details:

ZOL 0.025 mg/kg or 0.05mg/kg intravenous (i.v.) infusion was administered once a year.

Arm title	PAM-ZOL twice yearly
------------------	----------------------

Arm description:

Subjects who received PAM in core study received ZOL based on age and body weight in extension study. Subjects aged 3 to 17 years received 0.05 mg/kg of ZOL up to a maximum of 4 mg twice yearly at 6 month intervals. Subjects aged 1 to < 3 years received a lower ZOL dose of 0.025 mg/kg up to a maximum of 2 mg twice yearly at 6 month intervals, until they reached their third birthday when the dose was increased to 0.05 mg/kg at the next scheduled dose administration visit.

Arm type	Experimental
Investigational medicinal product name	Zoledronic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Intravenous use

Dosage and administration details:

ZOL 0.025 mg/kg or 0.05mg/kg i.v. infusion was administered twice yearly at 6 months intervals.

Primary: Number of subjects with adverse events (AEs) and serious adverse events (SAEs)

End point title	Number of subjects with adverse events (AEs) and serious adverse events (SAEs) ^[1]
End point description: An AE was defined as any unfavorable and unintended sign, symptom, or disease temporally associated with the use of study drug, whether or not related to study drug. A SAE was defined as an event which was fatal or life threatening, required or prolonged hospitalization, was significantly or permanently disabling or incapacitating, constituted a congenital anomaly or a birth defect, or encompassed any other clinically significant event that could jeopardize the subject or require medical or surgical intervention to prevent one of the aforementioned outcomes. Analysis was performed in safety population (SAF), defined as the subjects who received at least one dose of study medication in the extension study and had at least one post-baseline safety assessment.	
End point type	Primary
End point timeframe: From start of study treatment (extension phase) to end of study (extension phase)	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Only descriptive analysis was planned for this outcome measure.

Secondary: Percentage change from baseline in lumbar spine bone mineral density (BMD) at months 18 and 24

End point title	Percentage change from baseline in lumbar spine bone mineral density (BMD) at months 18 and 24
-----------------	--

End point description:

Bone-mineral density (BMD) was estimated dual energy X-ray absorptiometry (DEXA) method. Percent change from core baseline in lumbar spine BMD was calculated by using the formula: 100 (endpoint - core baseline)/core baseline. The analysis was performed in Intent-to-treat (ITT) population, defined as all randomized subjects who received at least one dose of study drug and had at least one post baseline efficacy assessment on the efficacy variable. The 'n' signifies those subjects with lumbar spine BMD measurements at both baseline and the respective specified time points, as determined by the visit window after last observation carried forward (LOCF) imputation for each group, respectively.

Secondary: Percentage of subjects with bone pain

End point title	Percentage of subjects with bone pain
End point description:	
<p>The Wong-Baker FACES pain rating scale was used to assess bone pain in all subjects. For very young children, their parent or guardian was rated the bone pain scale and the older subjects were self-rated the bone pain scale. There were 6 categories of pain intensity described from "no hurt" to "hurts worst", Face 0: no hurt, face 1: hurts little bit, face 2: hurts little more, face 3: hurts even more, face 4: hurts whole lot and face 5: hurts worst. Analysis was performed in ITT population. The 'n' signifies those subjects evaluable for this measure at specified time points for each group, respectively.</p>

Secondary: Change from baseline in cortical bone thickness at month 24

End point title	Change from baseline in cortical bone thickness at month 24
-----------------	---

End point description:

Cortical bone thickness was used to diagnose the bone loss in the study subjects. X-rays of the vertebral spine were used to determine cortical bone thickness. Change from core baseline in cortical bone thickness was calculated by using the formula: (endpoint - core baseline). Analysis was performed in ITT population. The number of subjects analysed (N) signifies those subjects with cortical bone thickness measurements at both baseline and the respective specified time points, as determined by the visit window after LOCF imputation for each group, respectively.

Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all) Epistaxis subjects affected / exposed occurrences (all)	1 / 27 (3.70%) 1 2 / 27 (7.41%) 2		
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all) Back pain subjects affected / exposed occurrences (all) Bone pain subjects affected / exposed occurrences (all) Muscle spasms subjects affected / exposed occurrences (all) Musculoskeletal chest pain subjects affected / exposed occurrences (all) Pain in extremity subjects affected / exposed occurrences (all)	4 / 27 (14.81%) 5 1 / 27 (3.70%) 2 4 / 27 (14.81%) 4 0 / 27 (0.00%) 0 1 / 27 (3.70%) 1 3 / 27 (11.11%) 3		

Scoliosis subjects affected / exposed occurrences (all)	1 / 27 (3.70%) 1		
Infections and infestations Ear infection subjects affected / exposed occurrences (all) Influenza subjects affected / exposed occurrences (all) Nasopharyngitis subjects affected / exposed occurrences (all) Pharyngitis subjects affected / exposed occurrences (all) Pharyngitis streptococcal subjects affected / exposed occurrences (all) Sinusitis subjects affected / exposed occurrences (all) Upper respiratory tract infection subjects affected / exposed occurrences (all)	0 / 27 (0.00%) 0 1 / 27 (3.70%) 1 2 / 27 (7.41%) 2 2 / 27 (7.41%) 2 0 / 27 (0.00%) 0 0 / 27 (0.00%) 0 3 / 27 (11.11%) 6		
Metabolism and nutrition disorders Hypercalcaemia subjects affected / exposed occurrences (all)	2 / 27 (7.41%) 2		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was terminated prematurely at the recommendation of the independent Data Safety Monitoring Board, who after review of interim unblinded safety and efficacy data observed an excess of fracture risk that had not changed from the core study.
