

Clinical trial results:

Neoadjuvant therapy for postmenopausal women with ER and/or PgR positive breast cancer. A randomized open phase II trial evaluating the efficacy of a 6 months preoperative treatment with Letrozole (2.5 mg/day) with or without Zoledronic acid (4 mg every 4 weeks) - FEMZONE -

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 February 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 February 2016
Global end of trial reached?	Yes
Global end of trial date	03 February 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To show that the combination of letrozole (2.5 mg/day) and zoledronic acid (4 mg q4w, or dose-adjusted based on renal function) is superior to letrozole (2.5 mg/day) monotherapy with respect to tumor response after 6 months pre-operative treatment in postmenopausal patients with primary breast cancer. Tumor response was defined as complete response (CR) or partial response (PR) based on MRI- or mammography and/or sonography according to modified RECIST criteria.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 May 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 168
Worldwide total number of subjects	168
EEA total number of subjects	168

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	39
From 65 to 84 years	115

85 years and over	14
-------------------	----

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 178 patients were screened for study eligibility at 27 study sites . Of these, 168 patients were randomized at 27 active centers and received treatment with either letrozole monotherapy (LET; N=79) or combination therapy with letrozole plus zoledronic acid (LET+ZOL; N=89).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Subject, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Letrozole (LET)

Arm description:

Letrozole 2.5 mg/day oral letrozole for approximately 6.5 months neoadjuvant treatment.

Arm type	Experimental
Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

2.5 mg/day

Arm title	Letrozole +Zoledronic Acid (LET+ZOL)
------------------	--------------------------------------

Arm description:

2.5 mg/day oral letrozole for approximately 6.5 months neoadjuvant treatment plus zoledronic acid 4 mg i.v. q4w

Arm type	Experimental
Investigational medicinal product name	Zoledronic Acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

4 mg i.v. q4w

Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

2.5 mg /day

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 October 2007	Adjustment of the time frame between tumor assessment and randomization to clinical routine: A time window of 4 weeks of the tumor assessment until randomization was now permitted instead of 3 weeks. Alternative method for tumor assessment: MRI mammography was additionally allowed. The chosen method at Baseline however, was to be used throughout the entire study period. Change in the number of blood samples taken for the pharmacogenetics substudy: For the analyses of gene expression and polymorphisms one blood sample was considered sufficient. This blood sample should preferably be collected at the baseline visit, but could be taken at any time during the course of the study. Adjustment of timelines to the current enrollment rate.
29 October 2007	Amendment 2 (release date 29-OCT-2007) was introduced to give patients enrolled in this study the opportunity to additionally participate in the SENTINA-substudy (a multicenter study across various main studies to evaluate sentinel node biopsy within the context of neoadjuvant therapy concepts in breast cancer). Eventually, no FEMZONE patients were enrolled in the SENTINA substudy.
08 January 2010	Update of the adverse effects of letrozole and zoledronic acid as well as some other minor administrative updates in the patient information and IC form. Announcement of the premature stop of study enrollment in June 2010 due to the slow enrollment rate with the expectation to have at least 200 patients enrolled at that time. Adjustment of the time frame between tumor assessment and randomization to clinical routine: A time window of 6 weeks of the tumor assessment until randomization was now permitted instead of 4 weeks as per Amendment 1 (and 3 weeks according to the original study protocol). Adjustment of timelines to the current enrolment rate.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study terminated after 178 patients screened and 168 randomized, due to insufficient recruitment rate (no safety issues decided the reason to terminate study). LPLV for study was on 13-DEC-2010. LPLV of the 5-year follow-up period was on 03-FEB-2016.

Notes:
