

Clinical trial results:

Efficacy and safety of Symbicort® Turbuhaler® 160/4.5 g/inhalation, two inhalations twice daily plus as-needed, compared with Seretide™ Diskus™ 50/500 g/inhalation, one inhalation twice daily plus terbutaline Turbuhaler 0.4 mg/inhalation as-needed - a 6-month, randomised, double-blind, parallel-group, active-controlled, multi-national phase IIIB study in adult and adolescent patients with persistent asthma (AHEAD)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 October 2006
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 October 2006
Global end of trial reached?	Yes
Global end of trial date	27 October 2006
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to compare the efficacy of 2 inhalations of Symbicort Turbuhaler 160/4.5 µg/inhalation twice daily plus Symbicort Turbuhaler 160/4.5 µg/inhalation as-needed with 1 inhalation of Seretide Diskus 50/500 µg/inhalation twice daily plus terbutaline Turbuhaler 0.4 mg/inhalation as-needed in patients with persistent asthma by evaluation of time to first severe asthma exacerbation as the primary outcome variable.

Protection of trial subjects:

The final clinical study protocol (CSP), including the final version of the Informed Consent Form, was approved or given a favourable opinion in writing by an Institutional Review Board (IRB) or Independent Ethics Committee (IEC). The investigator was to submit written approval to AstraZeneca before enrolling any patient into the study. In addition, before any participation in the genetic research part of the study took place, this part of the study (in CSP Appendix D) had to be approved by the appropriate IRB or IEC as well as the principal investigator(s).

The principal investigator at each centre was to ensure that the patients were given full and adequate oral and written information about the nature, purpose, possible risk, and possible benefit of the study. Patients were also to be notified that they were free to discontinue from the study at any time. The patients were to be given the opportunity to ask questions and allowed time to consider the information provided. For patients under age, this also applied to parent/legal guardian.

The patient's/parent's/legal guardian's signed and dated informed consent was to be obtained before conducting any procedure specifically for the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 May 2005
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

From 65 to 84 years	163
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This multicenter study was conducted in 17 countries between 2 May 2005 and 29 May 2006.

Pre-assignment

Screening details:

The study consisted of an enrolment visit, a 2-week run-in (standardization) period, randomization at Visit 2, and 3 further visits (Visits 3-5) at 4, 13 and 26 weeks. Subjects received 1 of 2 double-blinded treatments allocated in a random order.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Symbicort SMART

Arm description:

Symbicort® Turbuhaler® 160/4.5 µg/inhalation, two inhalations twice daily plus as-needed

Arm type	Experimental
Investigational medicinal product name	Symbicort® Turbuhaler® 160/4.5 µg/inhalation
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation powder
Routes of administration	Inhalation use

Dosage and administration details:

2 inhalations twice daily

Arm title	Seretide

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from the enrolment visit (visit 1) until visit 5 (26 weeks after randomisation). Only adverse events occurring after the start of randomised study medication are included in the summaries below.

Adverse event reporting additional description:

A total of 911 patients reported non-serious adverse events; 451 on Symbicort SMART, 460 on Seretide. Numbers for non-serious AEs in the reporting group table are based on the 5% threshold frequency.

Assessment type	Systematic
