

Clinical trial results:

A Randomized, Double-Blind, Controlled Evaluation of Tenofovir DF versus Adefovir Dipivoxil for the Treatment of Presumed Pre-core Mutant Chronic Hepatitis B

Summary

EudraCT number	2004-005119-27
Trial protocol	GB CZ DE ES IT
Global end of trial date	19 January 2016

Results information

Result version number	v1 (current)
This version publication date	02 February 2017
First version publication date	02 February 2017

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 January 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 January 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This primary objectives of this study were to compare the efficacy, safety, and tolerability of tenofovir disoproxil fumarate (TDF) versus adefovir dipivoxil (ADV) for the treatment of pre-core mutant chronic hepatitis B.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 June 2005
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 21
Country: Number of subjects enrolled	United Kingdom: 7
Country: Number of subjects enrolled	Bulgaria: 72
Country: Number of subjects enrolled	Czech Republic: 12
Country: Number of subjects enrolled	France: 21
Country: Number of subjects enrolled	Germany: 30
Country: Number of subjects enrolled	Greece: 29
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	United States: 39
Country: Number of subjects enrolled	New Zealand: 34
Country: Number of subjects enrolled	Poland: 24
Country: Number of subjects enrolled	Australia: 24
Country: Number of subjects enrolled	Turkey: 14
Country: Number of subjects enrolled	Netherlands: 2

Country: Number of subjects enrolled	Canada: 46
Worldwide total number of subjects	382
EEA total number of subjects	225

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	376
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in North America, Europe, and Australia/New Zealand. The first participant was screened on 07 June 2005. The last study visit occurred on 19 January 2016.

Pre-assignment

Screening details:

846 participants were screened.

Period 1

Period 1 title	Double-blind Period Through Week 48
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	TDF-TDF
------------------	---------

Arm description:

Tenofovir disoproxil fumarate (TDF) 300 mg plus placebo to match adefovir dipivoxil (ADV) (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added emtricitabine (FTC; as part of emtricitabine/tenofovir disoproxil fumarate (200/300 mg) fixed-dose combination (FDC) tablet) to their treatment regimen in the open-label period.

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	TDF, Viread®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

300 mg administered once daily

Investigational medicinal product name	Adefovir dipivoxil placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily

Arm title	ADV-TDF
------------------	---------

Arm description:

ADV 10 mg plus placebo to match TDF (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their treatment regimen in the open-label period.

Arm type	Active comparator
Investigational medicinal product name	Adefovir dipivoxil
Investigational medicinal product code	
Other name	ADV, Hepsera®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details: 10 mg administered once daily	
Investigational medicinal product name	Tenofovir disoproxil fumarate placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Administered once daily	

Number of subjects in period 1^[1]	TDF-TDF	ADV-TDF
Started	250	125
Completed	244	121
Not completed	6	4
Withdrew Consent	-	1
Protocol Violation	-	1
Lost to follow-up	1	-
Safety, Tolerability, or Efficacy Reason	5	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 7 participants who were randomized but not treated are not included in the subject disposition table.

Period 2

Period 2 title	Open-label Period: Weeks 49 - 96
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	TDF-TDF

Arm description:

TDF 300 mg plus placebo to match ADV (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their treatment regimen in the open-label period.

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	TDF, Viread®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
300 mg administered once daily

Investigational medicinal product name	Adefovir dipivoxil placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Administered once daily	
Investigational medicinal product name	Emtricitabine/tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	FTC/TDF Truvada®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
200/300 mg FDC tablet administered once daily	
Arm title	ADV-TDF
Arm description:	
ADV 10 mg plus placebo to match TDF (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their treatment regimen in the open-label period.	
Arm type	Active comparator
Investigational medicinal product name	Adefovir dipivoxil
Investigational medicinal product code	
Other name	ADV, Hepsera®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
10 mg administered once daily	
Investigational medicinal product name	Tenofovir disoproxil fumarate placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Administered once daily	
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	TDF, Viread®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
300 mg administered once daily	
Investigational medicinal product name	Emtricitabine/tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	FTC/TDF Truvada®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
200/300 mg FDC tablet administered once daily	

Number of subjects in period 2 ^[2]	TDF-TDF	ADV-TDF
Started	235	112
Completed	225	110
Not completed	10	2
Withdrew Consent	5	1
Lost to follow-up	2	-
Safety, Tolerability, or Efficacy Reason	3	1

Notes:

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 18 participants (9 TDF-TDF; 9 ADV-TDF) completed 48 weeks but did not continue on study.

Period 3

Period 3 title	Open-label Period: Weeks 97 - 144
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	TDF-TDF

Arm description:

TDF 300 mg plus placebo to match ADV (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their treatment regimen in the open-label period.

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	TDF, Viread®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

300 mg administered once daily

Investigational medicinal product name	Adefovir dipivoxil placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily

Investigational medicinal product name	Emtricitabine/tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	FTC/TDF Truvada®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200/300 mg FDC tablet administered once daily

Arm title	ADV-TDF
Arm description: ADV 10 mg plus placebo to match TDF (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their treatment regimen in the open-label period.	
Arm type	Active comparator
Investigational medicinal product name	Adefovir dipivoxil
Investigational medicinal product code	
Other name	ADV, Hepsera®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 10 mg administered once daily	
Investigational medicinal product name	Tenofovir disoproxil fumarate placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet

Arm description: ADV 10 mg plus placebo to match TDF (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their treatment regimen in the open-label period.	
Arm type	Active comparator
Investigational medicinal product name	Adefovir dipivoxil
Investigational medicinal product code	
Other name	ADV, Hepsera®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 10 mg administered once daily	
Investigational medicinal product name	Tenofovir disoproxil fumarate placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: Administered once daily	
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	TDF, Viread®
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: 300 mg administered once daily	
Investigational medicinal product name	Emtricitabine/tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	FTC/TDF Truvada®
Pharmaceutical forms	Tablet

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

200/300 mg FDC tablet administered once daily

Number of subjects in period g^[3]	TDF-TDF	ADV-TDF
Started	82	46
Completed	82	44
Not completed	0	2
Investigator's Discretion	-	1

---------------------------	--------------------

Subject analysis set description:

TDF 300 mg plus placebo to match ADV (double-blind period), followed by TDF 300 mg (open-label period). Participants in this reporting group added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their study regimen in the open-label period.

Subject analysis set title	ADV-TDF With No Addition of FTC
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
ADV 10 mg plus placebo to match TDF (double-blind period), followed by TDF 300 mg (open-label period). Participants in this reporting group did not add FTC to their study regimen in the open-label period.	
Primary: Percentage of Participants With HBV DNA < 400 Copies/mL and Histological Improvement (2-point Reduction in Knodell Necroinflammatory Score Without Worsening in Knodell Fibrosis Score) at Week 48	
End point title	Percentage of Participants With HBV DNA < 400 Copies/mL and Histological Improvement (2-point Reduction in Knodell Necroinflammatory Score Without Worsening in Knodell Fibrosis Score) at Week 48
End point description:	
Complete response was a composite endpoint defined as histological response and HBV DNA < 400 copies/mL. Histological response was based on the Knodell numerical scoring of liver biopsy specimens and defined as at least a 2-point reduction in Knodell necroinflammatory score without worsening in Knodell fibrosis score. The Knodell necroinflammatory score is the combined necrosis and inflammation domain scores and ranges from 0 to 14; the Knodell fibrosis domain score ranges from 0 to 4.	
A participant was a nonresponder for the primary endpoint if either biopsy (baseline or end-of-treatment) was missing or if there was not an HBV DNA value available at or beyond Week 40.	
Randomized and Treated Analysis Set: all participants who were randomized and received at least one dose of study medication; the missing-equals-failure approach was used where participants with missing data were considered to have failed to reach the endpoint.	
End point type	Primary

Statistical analyses

Statistical analysis title	Statistical Analysis - TDF-TDF vs ADV-TDF
Statistical analysis description:	
A two-sided 95% confidence interval (CI), stratified by baseline ALT ($\leq 2 \times \text{ULN}$ or $> 2 \times \text{ULN}$) was used to evaluate the difference (tenofovir DF - adefovir dipivoxil) in the proportion of complete responders between treatment groups.	
Comparison groups	TDF-TDF v ADV-TDF

Number of subjects included in analysis	375
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
P-value	< 0.001 ^[2]
Method	Z-test
Parameter estimate	Difference in proportions
Point estimate	23.5
Confidence interval	
level	95 %
sides	2-sided
lower limit	13.2
upper limit	33.8
Variability estimate	Standard error of the mean
Dispersion value	5.2

Notes:

[1] - With a sample size of 200 subjects in the tenofovir DF group and 100 subjects in the adefovir dipivoxil group, a two group large-sample normal approximation test of proportions with a one-sided 0.025 significance level would have 95% power to reject the null hypothesis that the tenofovir DF treatment was inferior to the adefovir dipivoxil treatment (difference in proportions was less than -0.100) in favor of the alternative hypothesis that the tenofovir DF treatment was not inferior.

[2] - P-value corresponds to a Z-test of the null hypothesis that the stratum-adjusted (baseline ALT $\geq 2 \times$ ULN or $> 2 \times$ ULN) difference is 0.

Secondary: Percentage of Participants With HBV DNA < 400 Copies/mL at Week 48

End point title	Percentage of Participants With HBV DNA < 400 Copies/mL at Week 48

Secondary: Number of Participants With HBV Genotypic Changes From Baseline at Week 48 (Resistance Surveillance)

End point title	Number of Participants With HBV Genotypic Changes From Baseline at Week 48 (Resistance Surveillance)
-----------------	--

End point description:

Of the total number analyzed, participants evaluated for resistance included those with HBV DNA \geq 400 copies/mL at Week 48, those with viral breakthrough, and those who discontinued after Week 24 with HBV DNA \geq 400 copies/mL.

Participants in the Randomized and Treated Analysis Set were analyzed to determine if they qualified for protocol criteria for resistance surveillance, and those meeting the criteria were evaluated.

Reporting groups

Reporting group title	Double-Blind TDF
-----------------------	------------------

Reporting group description:

Adverse events this reporting group include those occurring in the TDF-TDF group during the double-blind period only (baseline to Week 48).

TDF 300 mg plus placebo to match ADV (double-blind period).

Reporting group title	Double-Blind ADV
-----------------------	------------------

Reporting group description:

Adverse events this reporting group include those occurring in the ADV-TDF group during the double-blind period only (baseline to Week 48).

ADV 10 mg plus placebo to match TDF (double-blind period).

Reporting group title	Open-Label TDF
-----------------------	----------------

Reporting group description:

Adverse events for this reporting group include those occurring during the open-label TDF 300 mg period (Week 49 up to Week 384), regardless of which group they were randomized to in the double-blind period.

TDF 300/mg+ADV placebo or ADV 10 mg+TDF placebo (double-blind period), followed by TDF 300 mg (open-label period). Participants may have added FTC (as part of FTC/TDF (200/300 mg) FDC tablet) to their treatment regimen in the open-label period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 September 2005	<ul style="list-style-type: none">— The treatment phase of the study was extended to 240 weeks to evaluate long-term virological, serological, and biochemical response, as well as the safety profile observed among subjects initiating double-blind treatment with tenofovir DF and maintained on tenofovir DF (early) versus subjects initiating double-blind treatment with adefovir dipivoxil and switching to tenofovir DF at the end of the first year (deferred).— Statistical analysis of the antiviral and safety parameters at Week 96 (and every 48 weeks thereafter) was added to evaluate continuous (early) tenofovir DF treatment versus secondary(deferred) tenofovir DF treatment based on randomization to double-blind tenofovir DF or adefovir dipivoxil, respectively, at study entry in the first year. The original treatment assignment is to remain blinded to the subject and the investigator for the entire 240 weeks of the study.— A final required liver biopsy was added at Week 240.— To help characterize a role for combination therapy in subjects with persistent viral replication or incomplete virologic response, a provision was added for subjects with HBV DNA \geq 400 copies/mL at or after Week 72, confirmed on two consecutive visits, to be eligible to remain on tenofovir DF, switch to emtricitabine 200 mg/tenofovir DF 300 mg combination tablet taken QD, or initiate commercially available HBV therapy.
23 December 2005	<ul style="list-style-type: none">— Allowed up to 120 subjects to enroll who had previous exposure to emtricitabine or lamivudine— The ALT entry criterion was decreased from \geq 1.5 times the upper limit of normal (ULN) to simply \geq ULN— A provision for 10% variance for ALT and in time windows for study eligibility criteria (with approval of the medical monitor) was added.— The primary efficacy and safety analysis sets were redefined as all randomized subjects who received at least one dose of study medication
27 June 2008	<ul style="list-style-type: none">— The study duration was extended to 384 weeks (8 years).— Annual dual energy x-ray absorptiometry (DEXA) scans of the hip and spine from Week 192 to Week 384 were added to monitor for changes in bone mineral density.
09 September 2011	<ul style="list-style-type: none">— For subjects who provided a separate informed consent form, the collection of a blood sample for biomarker analysis (including pharmacogenomics) was added. These samples may be used for exploration of appropriate markers that may be predictive of virologic response and/or the tolerability of HBV therapies. Provision of samples for these analyses will not necessarily benefit subjects participating in this study; however, results may prove beneficial in the design and/or analyses of future HBV studies, and may improve our understanding of biological factors influencing patient health and disease.— Instructions were added for subjects to have a dose modification to every 48 hour dosing if creatinine clearance (Clcr) decreased to between 30 to 49 mL/min. If creatinine clearance values were confirmed to be below 30 mL/min, the medical monitor was to be contacted.— The management of subjects who seroconvert was clarified.— Visit windows for protocol-specific visits were clarified.
17 January 2013	<ul style="list-style-type: none">— The study was extended to 480 weeks for subjects who complete 384 weeks of study treatment under the original protocol.— Text was added providing instructions on Special Situations Reports.— Statements were added indicating that DEXA scans will not be performed beyond Week 384 due to unavailability of baseline values and the lack of decline in BMD from results available for Years 4 through 6.— The medical monitor for the study was changed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

There were no limitations affecting the analysis or results.
--
