

In patients from **Subgroup C**, *i.e.* with previously treated uncontrolled arterial hypertension, the mean DBP decreased during the short-term period by -8.0 ± 10.5 mmHg, and slightly decreased during the extension period as the mean change from inclusion to the last value was -11.0 ± 4.8 mmHg.

In the **FAS-24**, results were similar to those observed in the FAS:

- Regarding the change between baseline and D120, the mean DBP decreased by -13.6 ± 13.4 mmHg in Subgroup A, by -2.2 ± 10.9 mmHg in Subgroup B and by -8.0 ± 10.5 mmHg in Subgroup C.
- Regarding the change between baseline and M24, the mean DBP decreased by -13.4 ± 10.4 mmHg in Subgroup A, by -2.9 ± 11.4 mmHg in Subgroup B and by -9.4 ± 8.8 mmHg in Subgroup C.
- Regarding the change from baseline to the last value, the mean DBP decreased by -13.2 ± 12.1 mmHg in Subgroup A, by -2.2 ± 12.0 mmHg in Subgroup B and by -11.0 ± 4.8 mmHg in Subgroup C.

Inclusion = B00A

As regards **Subgroups D and E**:

- In Subgroup D, the mean DBP decreased from inclusion to the last value by -1.6 ± 12.8 mmHg.
- In Subgroup E, the mean DBP decreased from inclusion to the last value by -4.0 ± 15.0 mmHg.

Values of DBP at each visit and the changes from baseline to each visit, in the FAS (overall population and subgroups) are described in [Section 15.2.1.1.](#), together with results in the FAS-24.
