Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 April 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 March 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the tolerability of four drugs sodium valproate, 5-azacitidine, theophylline and ATRA when administered in combination

Protection of trial subjects:

The study protocol stipulated a strict entry criteria to ensure it was safe for patients to enrol onto the trial and receive therapy. The trial involved more visits to hospital than would usually be required and also extra blood tests to be performed than in standard clinical care. All patients will benefit from close monitoring during the trial period. As with all medications, treatment with the trial therapy had potential side effects of which all trial staff and patients are fully informed. Close monitoring during the treatment period allowed prevention, detection and treatment of these side effects.

Background therapy:

The only treatment provided on the study was the trial therapy (single arm trial).

Evidence for comparator:

N/A

Actual start date of recruitment	22 June 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 91
Worldwide total number of subjects	91
EEA total number of subjects	91

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	39
From 65 to 84 years	52
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Trial open to recruitment: 22-Jun-2006. First patient registered 10-Jul-2006. Last patient registered 05-Jan-2012

Pre-assignment

Screening details:

N/A: No screening assessments involved. Please refer to protocol for the eligibility criteria

Pre-assignment period milestones

Number of subjects started	91
Number of subjects completed	79

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Ineligible: 12
----------------------------	----------------

Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

N/A

Arms

Arm title	Phase II overall period
-----------	-------------------------

Arm description:

Experimental arm

Arm type	Experimental
Investigational medicinal product name	Sodium valproate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Sodium valproate was administered using the regime of 200mg three times a day for 4 days, increasing to 500mg twice a day for the next 4 days and escalating to 3000mg daily or the maximal tolerated dose by increments of 500 mg every four days.

Investigational medicinal product name	All-trans-retinoic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

ATRA was administered daily at a dose of 45 mg/m² daily in 2 divided doses separated by more than 8 hours.

Investigational medicinal product name	Theophylline
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule

Routes of administration	Oral use
Dosage and administration details:	
Theophylline was administered daily at a dose of 175mg.	
Investigational medicinal product name	Azacitidine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/skin-prick test
Routes of administration	Subcutaneous use

Dosage and administration details:

Azacitidine was administered subcutaneously at a daily dose of 75/mg2 on the first 7 working days of each cycle (i.e., Mon-Fri administration, Sat-Sun rest days, Mon-Tues administration). Each cycle was every 28 days. Patients received therapy for up to 6 cycles. If they were responding to therapy, treatment was continued.

Number of subjects in period 1^[1]	Phase II overall period
Started	79
Completed	16
Not completed	63
Consent withdrawn by subject	2
Physician decision	2
Adverse event, non-fatal	19
Concurrent illness (non-therapy related)	16
Lack of efficacy	24

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Some of the subjects enrolled to the pre-enrollment period did not reach the baseline period.

Baseline characteristics

End points

End points reporting groups

Reporting group title	Phase II overall period
Reporting group description:	
Experimental arm	

Primary: Assessment of safety of the four drugs, sodium valproate, 5-azacitidine, theophylline and ATRA when administered in combination

End point title	Assessment of safety of the four drugs, sodium valproate, 5-azacitidine, theophylline and ATRA when administered in combination ^[1]
-----------------	--

End point description:

Discontinuation of trial medication because of treatment-related toxicities

End point type	Primary
----------------	---------

End point timeframe:

From start of treatment until end of treatment schedule, or patient discontinued treatment.

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The protocol states that data will be presented in a descriptive fashion

End point values	Phase II overall period			
Subject group type	Reporting group			
Number of subjects analysed	79			
Units: Patients				
Discontinued due to treatment-related toxicities	20			
Did not discontinue due to treatment related toxic	59			

Statistical analyses

No statistical analyses for this end point

Primary: Haematological response

End point title	Haematological response ^[2]
-----------------	--

End point description:

Response was assessed using the Cheson Criteria (Appendix 6, 7, 8). This will include evidence of a sustained improvement in neutrophil and platelet count, reduction in peripheral blood and bone marrow blast numbers and reduction in platelet and red cell transfusion requirements (where assessable).

CR = Complete remission

CRi = Complete remission with incomplete blood count recovery

PR = Partial remission

End point type	Primary
----------------	---------

End point timeframe:

Response was assessed by weekly peripheral blood counts for the first cycle and twice monthly or as clinically indicated thereafter, and bone marrow assessment prior to treatment and at the end of cycles

1, 2, 3 and 6 of treatment

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The protocol states that data will be presented in a descriptive fashion

End point values	Phase II overall period			
Subject group type	Reporting group			
Number of subjects analysed	79			
Units: Patients				
CR	8			
CRi	7			
PR	11			
Other	53			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were reported from the start of study drug treatment until 28 days after the last dose or until the start of other anti-cancer therapy – whichever occurs first.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 August 2006	<p>Amendment of the study title to include the word theophylline to read 'Phase II Study of the Tolerability and Efficacy of the Histone Deacetylase Inhibitor Sodium Valproate given in Conjunction with 5-azacitidine, Theophylline and ATRA (all trans retinoic acid) in patients with Acute Myeloid Leukaemia and High Risk Myelodysplasia.'</p> <p>Addition of John Radcliffe Hospital Oxford as a Participating Centre. The Principal Investigator at Leicester Royal Infirmary has changed from that who was on the original COREC application.</p> <p>The correct version of the patient information sheet has been referenced in the consent form. Minor inconsistencies in the both the protocol and patient information sheet have been corrected.</p>
11 January 2007	<p>The number of patients treated in the study has been increased from 20 to 40 patients. The number of cycles of treatment has also been increased to 6 cycles from 3 cycles. The schedule of events has been amended accordingly and typographical errors to the protocol have been amended. The main changes are a) bone marrow assessments will be performed at screening, at the end of cycle 1, 2, 3 and 6 (5 assessments in total) instead of the 4 assessments done monthly on the current schedule, b) full blood counts are currently done weekly over the 3 cycles of treatment. Following the amendment, we will request a full blood count weekly for the first month and fortnightly thereafter.</p>
21 March 2007	<p>The first cohort of patients on the trial have received azacitidine at 50mg/m². The next cohort of patients are to receive 75mg/m² as per protocol. We are requesting that the first cohort of patients treated on the lower dose of azacitidine are allowed to increase their dose in subsequent cycles to 75mg/m² at the Chief Investigators discretion. This dose of azacitidine has been documented as safe and therapeutic in published studies.</p>
07 January 2009	<p>Extension to recruitment to recruit an additional 30 patients to the study. The treatment schedule has been amended with the aim of optimising the clinical impact of the IMPs.</p>
18 February 2009	<p>Addition of a patient diary that may help patients to record the dose they have been prescribed. Completion of the patient diary is entirely voluntary.</p>
14 October 2009	<p>Study protocol has been amended to clarify when bone marrow assessments are to be done and where they are to be sent, inclusion criteria has been amended. The end of cycle 2 bone marrow assessment will no longer be done and screening bone marrow may be taken within 14 days of starting the trial treatment. Bone marrow samples will now be forwarded to Oxford for analysis and the protocol has clarified the time points at which bone marrow assessments should be done after the initial 6 cycles of treatment. The protocol has also been amended to define reportable SAEs and the patient information sheet has been amended to inform patients that the consent form will be returned to the Sponsor for external monitoring of the consent process.</p>
20 September 2010	<p>The trial was extended to recruit an additional 10 patients in order to understand more clearly response rates in patients who have relapsed after allogeneic stem cell transplantation. It has also been clarified in the main patient information sheet where patient samples will be sent. The two consent forms have been combined into one form.</p>

22 August 2011	The storage conditions for 5-Azacitidine (IMP) have changed and the label and protocol have been amended to reflect this. The protocol has also been amended to clarify the definitions of reportable expected serious adverse reactions. In addition, it has been clarified that bone marrow samples may also be sent to the School of Cancer Sciences, Birmingham for evaluation of epigenetic changes in the patients treated with combined therapy. This has also been clarified in the Patient Information Sheet.
11 January 2012	The 5-Azacitidine used in the above named trial is provided by Ben Venue Laboratories and Celgene Ltd are due to supply clinical trial materials from an alternative manufacturer (Baxter Oncology GmbH, Germany). QP release will still be carried out by Catalent UK Packaging Limited. Almac Clinical Services will also perform QP release for the purpose of this study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
