

## Clinical trial results:

### A Multicenter, Long-Term Extension Study to Assess Safety of Oral Sildenafil in the Treatment of Subjects Who Have Completed Study A1481131.

#### Summary

EudraCT number	2005-000963-25
Trial protocol	SE GB FI SK Outside EU/EEA
Global end of trial date	24 December 2012

#### Results information

Result version number	v1 (current)
This version publication date	25 May 2016
First version publication date	01 August 2015

#### Trial information

##### Trial identification

Sponsor protocol code	A1481156
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00159874
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Pfizer Inc.
Sponsor organisation address	235 E 42nd Street, New York, United States, NY 10017
Public contact	Clinical Trials gov Call center, Pfizer Inc., 001 8007181021, ClinicalTrials.gov_Inquiries@pfizer.com
Scientific contact	Clinical Trials gov Call center, Pfizer Inc., 001 8007181021, ClinicalTrials.gov_Inquiries@pfizer.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMEA-000671-PIP01-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 August 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 December 2012
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to assess the safety and tolerability of oral sildenafil in the chronic treatment of pediatric subjects with Pulmonary arterial hypertension (PAH).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 January 2004
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 3
Country: Number of subjects enrolled	Mexico: 14
Country: Number of subjects enrolled	Brazil: 6
Country: Number of subjects enrolled	Chile: 2
Country: Number of subjects enrolled	Japan: 1
Country: Number of subjects enrolled	Russian Federation: 13
Country: Number of subjects enrolled	Colombia: 34
Country: Number of subjects enrolled	Guatemala: 25
Country: Number of subjects enrolled	India: 27
Country: Number of subjects enrolled	Malaysia: 8
Country: Number of subjects enrolled	United States: 39
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	Hungary: 21
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Poland: 33
Country: Number of subjects enrolled	Canada: 1
Worldwide total number of subjects	234
EEA total number of subjects	59

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	6
Children (2-11 years)	129
Adolescents (12-17 years)	99
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This extension study included 220 subjects at 31 sites. 14 subjects did not go from A1481131 (2006-002235-25) to A1481156. Subject from one center in Canada participated in base study A1481131 (2006-002235-25) but not in this extension study.

### Pre-assignment

Screening details:

Sildenafil subjects remained in the same dose group as in study A1481131(2006-002235-25).Subjects randomized to placebo in 2006-002235-25 were rerandomized to sildenafil in A1481156. Placebo subjects in low weight category were rerandomized to medium or high dose(1:2) and other weight categories were re randomized to low, medium or high dose(1:1:1)

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Sildenafil Low/Low Dose

Arm description:

Subjects randomized to sildenafil low dose in study A1481131 (2006-002235-25) and in the extension study A1481156.

Arm type	Experimental
Investigational medicinal product name	Sildenafil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 10 milligram (mg) thrice a day (TID) for body weights between 20-45 kilogram (kg) and >45 kg.

<b>Arm title</b>	Sildenafil Medium/ Medium Dose
------------------	--------------------------------

Arm description:

Subjects randomized to sildenafil medium dose in study A1481131 (2006-002235-25) and in the extension study A1481156.

Arm type	Experimental
Investigational medicinal product name	Sildenafil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received 10, 20, 40 mg TID for body weights greater than or equal to ( $\geq$ ) 8-20 kg, > 20-45 kg, > 45 kg respectively.

<b>Arm title</b>	Sildenafil High/ High Dose
------------------	----------------------------

Arm description:

Subjects randomized to sildenafil high dose in study A1481131 (2006-002235-25) and in the extension study A1481156.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Sildenafil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received 10 mg for body weight $\leq 20$ kg or 20, 40, 80 mg TID for body weights $\geq 8-20$ kg, $> 20-45$ kg, $> 45$ kg respectively.	
<b>Arm title</b>	Placebo/ Low Dose
Arm description:	
Subjects randomized to placebo in study A1481131 (2006-002235-25) and randomized to sildenafil low dose in study A1481156.	
Arm type	Experimental
Investigational medicinal product name	Sildenafil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received 10 mg TID for body weights between 20-45 kg and $>45$ kg.	
<b>Arm title</b>	Placebo/ Medium Dose
Arm description:	
Subjects randomized to placebo in study A1481131 (2006-002235-25) and randomized to sildenafil medium dose in study A1481156.	
Arm type	Experimental
Investigational medicinal product name	Sildenafil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received 10, 20, 40 mg TID for body weights $\geq 8-20$ kg, $> 20-45$ kg, $> 45$ kg respectively.	
<b>Arm title</b>	Placebo/ High Dose
Arm description:	
Subjects randomized to placebo in study A1481131 (2006-002235-25) and randomized to sildenafil high dose in study A1481156.	
Arm type	Experimental
Investigational medicinal product name	Sildenafil
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Subjects received 10 mg for body weight $\leq 20$ kg or 20, 40, 80 mg TID for body weights $\geq 8-20$ kg, $> 20-45$ kg, $> 45$ kg respectively.	
<b>Arm title</b>	Placebo Non-randomized
Arm description:	
This group comprised those placebo subjects who either discontinued from base study A1481131 (2006-002235-25) or chose not to enter study A1481156 and hence not randomly assigned to a sildenafil dose group at the start of study A1481156.	
Arm type	No intervention
No investigational medicinal product assigned in this arm

No statistical analyses for this end point

## Primary: Down Titration in Dose Due to Intolerability

End point title Down Titration in Dose Due to Intolerability<sup>[8]</sup>

End point description:

Based on review of the survival data, DMC concluded that the high dose of sildenafil was associated with a harmful effect on survival when compared to the low dose. The DMC also expressed concern as to the potential dose-response relationship between increasing dose and mortality. Therefore, on 04 August 2011, the DMC recommended discontinuation of the 40 mg and 80 mg TID doses, as well as the 20 mg TID dose in children with body weight less than ( $\leq$ )20 kg. The protocol was amended per DMC recommendations. Safety population included all randomly assigned subjects who took at least 1 dose of study medication in Study A1481131 (2006-002235-25).

End point type Primary

End point timeframe:

Pre-DMC recommendation (04 August 2011)

Notes:

[8] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be reported for this endpoint.

End point values	Sildenafil Low/Low Dose	Sildenafil Medium/ Medium Dose	Sildenafil High/ High Dose	Placebo/ Low Dose

No statistical analyses for this end point

## Primary: Number of Subjects With Deterioration Post Baseline in Visual Acuity Safety Tests

End point title	Number of Subjects With Deterioration Post Baseline in Visual Acuity Safety Tests <sup>[9]</sup>
-----------------	--

End point description:

Visual Acuity is measured either using the reduced Snellen test or via Teller cards, and was assessed in the left and right eyes separately. There were 9 lines on the reduced Snellen chart which were coded as 6/60, 6/36, 6/24, 6/18, 6/12, 6/9, 6/6, 6/5, 6/4 (where 6/60 was the easiest to read and 6/4 was the most difficult to read). If a subject experienced a visual AE the investigator was asked to perform additional ocular assessments either at the visit when the subject reported the visual Ae or at an unplanned visit. Safety population included all randomly assigned subjects who took at least 1 dose of study medication in Study A1481131 (2006-002235-25).

End point type	Primary

## Statistical analyses

No statistical analyses for this end point

## Primary: Number of Subjects With Deterioration Post Baseline in Color Vision Monitoring Safety Tests

End point title	Number of Subjects With Deterioration Post Baseline in Color
-----------------	--

## End point description:

Color vision was measured where appropriate via the Farnsworth-Munsell D-15 Hue test. This test was performed in both eyes simultaneously or just in a single specific eye. If using a single eye the same eye was used throughout the study. In case of young subjects an age-and-ability-appropriate evaluation such as the Ishihara Test for Unlettered Persons were conducted. Safety population included all randomly assigned subjects who took at least 1 dose of study medication in Study A1481131 (2006-002235-25).

## Secondary: Peak Volume of Oxygen (VO2) Consumed at Year 1 Using a Bicycle Ergometry Cardiopulmonary Exercise Test (CPX)

End point title	Peak Volume of Oxygen (VO2) Consumed at Year 1 Using a Bicycle Ergometry Cardiopulmonary Exercise Test (CPX)
-----------------	--

End point description:

Exercise Tolerance Test (CPX test) was performed on developmentally able subjects to determine peak volume of VO2 consumed. Subjects were assumed to be developmentally able if they had a CPX exercise assessment at any visit during study A1481131(N2006-002235-25). The CPX tests were performed as close to trough plasma levels of sildenafil as possible, i.e., prior to dosing and at least 4 hours after previous dose. If subjects were able to perform CPX test in Study A1481131(2006-002235-25), they were expected to be able to perform the exercise paradigm in extension study (A1481156) unless their clinical condition had deteriorated and investigator considered this was unsafe for the subject. An intent to treat (ITT) population included all randomized subjects who took at least 1 dose of study medication in base study and certain analyses were conducted at pre-specified time points: 1, 2 years and 3, 4 and 5 years (where data quantity allowed) from A1481131(2006-002235-25) baseline.

End point type	Secondary

## Statistical analyses

<b>Statistical analysis title</b>	Sildenafil Low Dose vs. Sildenafil Medium Dose
Statistical analysis description:	
Analyses were performed using analysis of covariance (ANCOVA) with etiology, weight, day of assessment and baseline peak VO2 as the covariates. Least square mean difference of -7.02 was calculated as ' Sildenafil Medium Dose – Low Dose' for percent change from baseline in Peak VO2. For the treatment comparison, results were based on total 65 subjects, 33 from low dose and 32 from medium dose Sildenafil reporting groups.	
Comparison groups	Sildenafil Low Dose v Sildenafil Medium Dose
Number of subjects included in analysis	74
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.253
Method	ANCOVA
Parameter estimate	Least Square Mean Difference
Point estimate	-7.02
Confidence interval	
level	95 %
sides	2-sided
lower limit	-19.13
upper limit	5.09
Variability estimate	Standard error of the mean
Dispersion value	6.1

<b>Statistical analysis title</b>	Sildenafil Low Dose vs. Sildenafil High Dose
Statistical analysis description:	
Analyses were performed using ANCOVA with etiology, weight, day of assessment and baseline peak VO2 as the covariates. Least square mean difference of -9.84 was calculated as ' Sildenafil High Dose – Low Dose' for percent change from baseline in Peak VO2. For the treatment comparison, results were based on total 68 subjects, 33 from low dose and 35 from high dose Sildenafil reporting groups.	
Comparison groups	Sildenafil High Dose v Sildenafil Low Dose
Number of subjects included in analysis	78
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.1
Method	ANCOVA
Parameter estimate	Least Square Mean Difference
Point estimate	-9.84

The WHO PH functional classification was as follows: Class I: Subjects with PH but without resulting limitation of physical activity. Class II: Subjects with PH resulting in slight limitation of physical activity. Class III: Subjects with PH resulting in marked limitation of physical activity. Class IV: Subjects with PH with inability to carry out any physical activity without symptoms. Changes from baseline in functional class were summarized at Years 1, 2, 3 and 4. Numbers of subjects improving by 3 classes, improving

by 2 classes, improving by 1 class, not changing, worsening by 1 class, worsening by 2 classes or worsening by 3 classes from A1481131 baseline at Years 1, 2, 3 and 4 were evaluated. An ITT population included all randomly assigned subjects who took at least 1 dose of study medication in base study and certain analyses were conducted at pre-specified time points: 1, 2 years and 3, 4 and 5 years (where data quantity allowed) from A1481131 (2006-002235-25) baseline.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to Follow--Up visit (30 to 40 days after study completion or treatment discontinuation)

Adverse event reporting additional description:

The same event may appear as both an AE/SAE. However, what is presented are distinct events. An event may be categorized as serious in 1 subject and as nonserious in another subject, or 1 subject may have experienced both a serious/nonserious event during the study. On treatment deaths during the study were reported in SAE section.

Assessment type	Non-systematic

occurrences (all)	3	3	4

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 June 2006	<ol style="list-style-type: none"><li>1. Made revisions to address the European Medicines Agency (EMA) Committee for Medicinal Products for Human Use guideline on the exposure to medicinal products during pregnancy, need for post-authorization data.</li><li>2. Made revisions to address the European Commission Decision in June 2006 that Revatio and Viagra (sildenafil citrate) should be contraindicated in the EU in subjects who have loss of vision in 1 eye because of non-arteritic anterior ischemic optic neuropathy (NAION), regardless of whether this episode was in connection or not with previous Phosphodiesterase 5 (PDE5) inhibitor exposure (new exclusion criterion added and safety information provided).</li></ol>
15 April 2009	<ol style="list-style-type: none"><li>1. Increased survival follow up frequency from yearly to every 3 months.</li></ol>
19 August 2011	<ol style="list-style-type: none"><li>1. The DMC concluded that in the context of this clinical trial the high dose of sildenafil was associated with a harmful effect on survival when compared to the low dose. The DMC also expressed concern as to the apparent dose response relationship between increasing dose and mortality, including when comparing the medium dose to the low dose. Therefore, the DMC recommended immediate discontinuation of the 40 mg and 80 mg doses, as well as the 20 mg dose in children with body weight <math>\leq 20</math> kg. Those subjects on "High Dose", irrespective of weight group, were to be immediately down-titrated based on the clear relationship between mortality and "High Dose" use. Advised physicians to exercise great caution in prescribing "Medium Dose" sildenafil for children weighing <math>&lt;45</math> kg, but to evaluate the responses of each subject individually in order to make an assessment of risk:benefit. The Summary of dosing based on weight groups is listed below:<ul style="list-style-type: none"><li>- For children <math>&lt;20</math> kg in weight: Either consider using alternative therapies if available, or use sildenafil in a dose no greater than 10 mg TID.</li><li>- For children between 20 and 45 kg, consider using "Low Dose" (10 mg TID) and under no circumstances should the dose exceed 20 mg TID.</li><li>- For children greater than 45 kg a dose of 20 mg TID is the maximal dose that should be used.</li></ul></li><li>2. Abnormal values in aspartate transaminase (AST) and/or alanine transaminase (ALT) concurrent with abnormal elevations in total bilirubin that meet the criteria outlined below in the absence of other causes of liver injury are considered potential cases of drug-induced liver injury (potential Hy's Law cases) and should always be considered important medical events.</li><li>3. If the trial subject's partner becomes or is found to be pregnant while receiving the investigational product, the investigator should obtain agreement from the subject's partner for the release of their pregnancy information for the purpose of safety monitoring.</li></ol>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
