

## Clinical trial results:

### AN OPEN, RANDOMISED, MULTICENTRE CLINICAL STUDY TO INVESTIGATE THE SAFETY AND EFFICACY OF STEROID WITHDRAWAL WITH TACROLIMUS, MYCOPHENOLATE MOFETIL AND DACLIZUMAB AGAINST TACROLIMUS, MYCOPHENOLATE MOFETIL AND STEROIDS IN CHILDREN AFTER KIDNEY TRANSPLANTATION

#### Summary

EudraCT number	2005-001348-22
Trial protocol	CZ GB SE HU BE DE IT
Global end of trial date	25 February 2008

#### Results information

Result version number	v2 (current)
This version publication date	19 May 2016
First version publication date	20 June 2015
Version creation reason	• Correction of full data set Non-system related, non-substantial update needed.

#### Trial information

##### Trial identification

Sponsor protocol code	FG-506-02-43
-----------------------	--------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00296348
WHO universal trial number (UTN)	-
Other trial identifiers	International Study Number: PRG-EC-0243, Acronym: TWIST

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 February 2008
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 February 2008
Global end of trial reached?	Yes
Global end of trial date	25 February 2008
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to investigate the impact of early corticosteroid withdrawal in paediatric renal transplant patients on growth expressed as change in height standard deviation score (SDS) from baseline to end of study (EOS).

Protection of trial subjects:

This clinical study was written, conducted and reported in accordance with the protocol, ICH GCP Guidelines, and applicable local regulations, including the European Directive 2001/20/EC, on the protection of human rights, and with the ethical principles that have their origin in the Declaration of Helsinki. Astellas ensures that the use and disclosure of protected health information (PHI) obtained during a research study complies with the federal, national and/or regional legislation related to the privacy and protection of personal information.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 September 2005
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 3
Country: Number of subjects enrolled	United Kingdom: 76
Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	Czech Republic: 8
Country: Number of subjects enrolled	France: 17
Country: Number of subjects enrolled	Germany: 22
Country: Number of subjects enrolled	Hungary: 11
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	Israel: 7
Country: Number of subjects enrolled	Poland: 23
Country: Number of subjects enrolled	Romania: 4
Country: Number of subjects enrolled	South Africa: 4
Country: Number of subjects enrolled	Taiwan: 2

Worldwide total number of subjects	200
EEA total number of subjects	187

Notes:

---

**Subjects enrolled per age group**

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	92
Adolescents (12-17 years)	108
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was performed in 32 centers across 13 countries.

### Pre-assignment

Screening details:

Screening took place at baseline visit day 0. Screening assessments included: patient data, pregnancy test, donor/organ data, surgical details, body, height, weight, vital signs, blood pressure, and routine laboratory evaluations.

### Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This was an open label study so there was no blinding necessary.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Arm 1: Tacrolimus+MMF+MAB(Daclizumab)+Corticosteroids(Day 0-4)

Arm description:

Arm 1 consisted of Tacrolimus, Mycophenolate mofetil (MMF), Daclizumab (MAB) and Corticosteroids as treatment for four days only.

Arm type	Experimental
Investigational medicinal product name	Tacrolimus
Investigational medicinal product code	FK506
Other name	Prograf
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Tacrolimus (both treatment arms): The initial daily dose was 0.3 mg/kg per os (oral) (p.o.) given in 2 doses (equals 0.15 mg/kg twice daily) post-operatively. The initial dose of 0.15 mg/kg of tacrolimus was to be administered within 12 hours after reperfusion. Recipients of a living donor organ could receive pre-dosing with tacrolimus according to the hospital's routine practice. Subsequent oral tacrolimus doses would be adjusted based on clinical evidence of efficacy and occurrence of adverse events (AEs), and observing the following recommended tacrolimus whole blood trough level ranges: Day 0 -21: 10 - 20 ng/mL, Day 22 - 183: 5 - 15 ng/mL. Tacrolimus capsules were to be swallowed with fluid (preferably water, but not with grapefruit juice) at least 1 hour before meals or 2 hours after meals in the morning and in the evening. Administration of tacrolimus via nasogastric tube was allowed.

Investigational medicinal product name	Mycophenolate Mofetil
Investigational medicinal product code	
Other name	MMF
Pharmaceutical forms	Capsule, Powder for oral suspension
Routes of administration	Oral use

Dosage and administration details:

MMF (both treatment arms): The initial dose of 600 mg/m<sup>2</sup> of MMF was to be given pre-operatively. The first postoperative dose of MMF was administered within 12 hours following reperfusion. The daily dose was 1200 mg/m<sup>2</sup> given in 2 doses (equals 600 mg/m<sup>2</sup> twice daily) for the first 2 weeks. Thereafter a daily dose was 600 mg/m<sup>2</sup> given in 2 doses (equals 300 mg/m<sup>2</sup> twice daily). The total daily dose could be adjusted if medically indicated.

Investigational medicinal product name	Daclizumab
Investigational medicinal product code	
Other name	MAB

Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Daclizumab (used in treatment arm 1 only). The first dose of daclizumab of 1.0 mg/kg had to be administered intravenously within 24 hours before reperfusion. The second dose of daclizumab of 1.0 mg/kg had to be given intravenously on post-operative Day 14. Only 2 doses of daclizumab could be given. The calculated volume of daclizumab must be mixed with 50 mL of sterile 0.9% sodium chloride solution and administered via a central vein over a 15 minute period. When mixing the solution, it was not to be shaken, but gently inverted in order to avoid foaming. Care must be taken to assure sterility of the prepared solution because the drug product does not contain any antimicrobial preservatives or bacteriostatic agents.

Investigational medicinal product name	Corticosteroids
Investigational medicinal product code	
Other name	Methylprednisolone or equivalent
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous bolus use , Oral use

**Dosage and administration details:**

Corticosteroids were not provided as study medication but were administered as additional immunosuppressive treatment. Corticosteroids – for treatment arm 1:

Methylprednisolone or equivalent:

Day 0\*: 300-600 mg/m<sup>2</sup> i.v. bolus followed by oral (\*= pre-, intra-, or post-operatively)

Prednisone or equivalent:

Day 1: 60 mg/m<sup>2</sup> p.o.

Day 2: 40 mg/m<sup>2</sup> p.o.

Day 3: 30 mg/m<sup>2</sup> p.o.

Day 4: 20 mg/m<sup>2</sup> p.o.

Day 5- 183: none

<b>Arm title</b>	Arm 2: Tacrolimus + MMF + Corticosteroids
------------------	---

**Arm description:**

Arm 2 consisted of Tacrolimus, Mycophenolate mofetil (MMF) and Corticosteroids as treatment.

Arm type	Active comparator
Investigational medicinal product name	Tacrolimus
Investigational medicinal product code	FK506
Other name	Prograf
Pharmaceutical forms	Capsule
Routes of administration	Oral use

**Dosage and administration details:**

Tacrolimus (both treatment arms): The initial daily dose was 0.3 mg/kg p.o. given in 2 doses (equals 0.15 mg/kg twice daily) post-operatively. The initial dose of 0.15 mg/kg of tacrolimus was to be administered within 12 hours after reperfusion. Recipients of a living donor organ could receive pre-dosing with tacrolimus according to the hospital's routine practice. Subsequent oral tacrolimus doses would be adjusted based on clinical evidence of efficacy and occurrence of AEs, and observing the following recommended tacrolimus whole blood trough level ranges: Day 0 -21: 10 - 20 ng/mL, Day 22 - 183: 5 - 15 ng/mL. Tacrolimus capsules were to be swallowed with fluid (preferably water, but not with grapefruit juice) at least 1 hour before meals or 2 hours after meals in the morning and in the evening. Administration of tacrolimus via nasogastric tube was allowed.

Investigational medicinal product name	Mycophenolate Mofetil
Investigational medicinal product code	
Other name	MMF
Pharmaceutical forms	Capsule, Powder for oral suspension
Routes of administration	Oral use

**Dosage and administration details:**

MMF (both treatment arms): The initial dose of 600 mg/m<sup>2</sup> of MMF was to be given pre-operatively. The first postoperative dose of MMF was administered within 12 hours following reperfusion. The daily dose was 1200 mg/m<sup>2</sup> given in 2 doses (equals 600 mg/m<sup>2</sup> twice daily) for the first 2 weeks. Thereafter a daily dose was 600 mg/m<sup>2</sup> given in 2 doses (equals 300 mg/m<sup>2</sup> twice daily). The total daily dose could be adjusted if medically indicated.

## Baseline characteristics

### Reporting groups

Reporting group title	Arm 1: Tacrolimus+MMF+MAB(Daclizumab)+Corticosteroids(Day 0-4)
-----------------------	---

Reporting group description:

Arm 1 consisted of Tacrolimus, Mycophenolate mofetil (MMF), Daclizumab (MAB) and Corticosteroids as treatment for four days only.

Reporting group title	Arm 2: Tacrolimus + MMF + Corticosteroids
-----------------------	---

Reporting group description:

Arm 2 consisted of Tacrolimus, Mycophenolate mofetil (MMF) and Corticosteroids as treatment.

Reporting group values	Arm 1: Tacrolimus+MMF+MAB(Daclizumab)+Corticosteroids(Day 0-4)	Arm 2: Tacrolimus + MMF + Corticosteroids	Total
Number of subjects	100	100	200
Age categorical			
Units: Subjects			
In utero			0
Preterm newborn infants (gestational age < 37 wks)			0
Newborns (0-27 days)			0
Infants and toddlers (28 days-23 months)			0
Children (2-11 years)			0
Adolescents (12-17 years)			0
Adults (18-64 years)			0
From 65-84 years			0
85 years and over			0
Age continuous			
Age values are based on the Full Analysis Set (FAS). The FAS contains all randomized and transplanted patients with results attributed to the treatment group that they were randomized to and who received at least one dose of study medication (tacrolimus, MMF, daclizumab or steroids).			
Units: years			
arithmetic mean	10.8	11.3	
standard deviation	± 4.2	± 4.1	-
Gender categorical			
Gender values are based on the FAS.			
Units: Subjects			
Female	32	39	71
Male	66	59	125
Subjects not included in FAS	2	2	4
Height			
Height values are based on the FAS.			
Units: cm			
arithmetic mean	134.4	136.8

## End points

### End points reporting groups

Reporting group title	Arm 1: Tacrolimus+MMF+MAB(Daclizumab)+Corticosteroids(Day 0-4)
Reporting group description: Arm 1 consisted of Tacrolimus, Mycophenolate mofetil (MMF), Daclizumab (MAB) and Corticosteroids as treatment for four days only.	
Reporting group title	Arm 2: Tacrolimus + MMF + Corticosteroids
Reporting group description: Arm 2 consisted of Tacrolimus, Mycophenolate mofetil (MMF) and Corticosteroids as treatment.	

### Primary: Growth, expressed as change in height Standard Deviation Score (SDS) from baseline to End of Study (EOS)

End point title	Growth, expressed as change in height Standard Deviation Score (SDS) from baseline to End of Study (EOS)
-----------------	--

End point description:

The study analysis population for this endpoint consisted of the Primary Analysis Set (PAS). The PAS contains all randomized and transplanted patients who received at least one dose of study medication and who have valid measurements (i.e. excluding estimated values) of stature height at baseline and Month 6 (Visit 8 for completers, follow-up visit for withdrawn patients). Missing height at Visit 8 or at 6-month follow up (also for lost to follow-up patients) was estimated with the last available height (last observation carried forward (LOCF)). The change in height SDS from baseline will be calculated according to the formula:

$\Delta \text{SDS} = \text{SDSEOS} - \text{SDS}_{\text{baseline}}$ ,

Where

$\text{SDS} = (\text{height}_{\text{measured}} - \text{height}_{\text{standard population}}) / \text{SD}_{\text{standard population}}$ .

The two treatment groups will be compared and tested for differences in mean change in height SDS from baseline.

End point type	Primary
----------------	---------

End point timeframe:

Baseline to End of Study (EOS), up to 6 months.

End point values	Arm 1: Tacrolimus+M MF+MAB(Dacliz umab)+Cortico steroids(Day 0- 4)	Arm 2: Tacrolimus + MMF + Corticosteroids		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	93	91		
Units: N/A (see SDS formula)				
arithmetic mean (standard deviation)	0.17 (± 0.4)	0.04 (± 0.3)		

## Statistical analyses

<b>Statistical analysis title</b>	Statistical analysis 1
Statistical analysis description: The two treatment groups will be compared and tested for differences in mean change in height SDS from baseline. The null and alternative hypotheses are: H0: $\mu_{ST} = \mu_{SF}$ versus Ha: $\mu_{ST} \neq \mu_{SF}$ , where $\mu_{ST}$ and $\mu_{SF}$ represent the mean change in height SDS from baseline to EOS in the steroid treated group (ST) and the steroid free group (SF) respectively.	
Comparison groups	Arm 1: Tacrolimus+MMF+MAB(Daclizumab)+Corticosteroids(Day 0-4)
Number of subjects included in analysis	184
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	= 0.005
Method	ANCOVA
Parameter estimate	Treatment group diff. in adj. mean ch.
Point estimate	0.14
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.04
upper limit	0.23

Notes:

[1] - Parameter estimate: Treatment group difference in adjusted mean change. The primary endpoint was analyzed by ANCOVA with the factors treatment group, pubertal status and the covariate baseline height SDS on the primary analysis set.

## Secondary: Number of participants with acute rejections (AR)

End point title	Number of participants with acute rejections (AR)
End point description: FAS population. SRAR: not treated with new/increasing corticosteroids, antibodies/other meds and resolved regardless of tacrolimus/MMF dose changes. CSAR: treated with new/increased corticosteroids only and resolved, regardless of tacrolimus/MMF dose changes. A corticosteroid resistant acute rejection (CRAR) was defined as a rejection episode which did not resolve following treatment with corticosteroids. Rejection episodes which were initially treated with antibodies only were also be included in this category. Other acute rejection: could not be classified into the above categories. Chronic rejections were identified from biopsy findings and AE reporting during medical review.	
End point type	Secondary
End point timeframe: Up to 6 months.	

End point values	Arm 1: Tacrolimus+M MF+MAB(Dacliz umab)+Cortico steroids(Day 0- 4)	Arm 2: Tacrolimus + MMF + Corticosteroids

End point description:

Delayed graft function is defined as post-operative dialysis for more than one day during the time period from Day 0 to Day 7. Never functioning graft is defined as dialysis from the first week on until study end or withdrawal, unless a functioning graft was reported at follow-up.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to day 7 (week 1), DGF must be within 7 days of transplant .

End point values	Arm 1: Tacrolimus+M MF+MAB(Dacliz umab)+Cortico steroids(Day 0- 4)	Arm 2: Tacrolimus + MMF + Corticosteroids

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

An adverse event was considered treatment-emergent if it started on or after the day of first study medication intake (tacrolimus, MMF, MAB or steroids).

Adverse event reporting additional description:

FAS population.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 February 2006	Amendment 2, a substantial amendment, (dated 20 February, 2006) allowed for the introduction of 2 sub-studies within this study; one for the study "Estimation of Rejection Risk in Kidney Recipients by Novel Immunological Markers" and one for study "Pharmacokinetics and Pharmacogenetics of tacrolimus and MMF". These 2 sub-studies were performed only at trial sites which agreed to participate in the additional tests and obtained an approval by the responsible Ethics Committee and Competent Authority where applicable. These sub-studies and the obtained data do not form a part of the clinical report for study FG-506-02-43.
17 July 2006	Amendment 3, a substantial amendment, (dated 17 July, 2006) made the change that body height and weight were not to be measured at Visit 2 (Day 1 after operation), since children, unlike adults, are usually not mobilized on the day of surgery. This change did not jeopardize evaluation of study results since the main endpoint of the study compared patient height at baseline (before surgery) to that at the end of study (at 6 months after surgery).

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported

---
