

Clinical trial results:

An open-label, long-term, safety, and tolerability extension study using the pediatric formulation of bosentan in the treatment of children with idiopathic or familial pulmonary arterial hypertension who completed FUTURE 1

Summary

EudraCT number	2005-001967-70
Trial protocol	GB DE IT
Global end of trial date	28 October 2011

Results information

Result version number	v2 (current)
This version publication date	17 June 2016
First version publication date	06 August 2015
Version creation reason

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 September 2012
Is this the analysis of the primary completion data?	Yes
Primary completion date	28 October 2011
Global end of trial reached?	Yes
Global end of trial date	28 October 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the long-term safety and tolerability of the pediatric formulation of bosentan in children with idiopathic or familial pulmonary arterial hypertension (iPAH or fPAH)

Protection of trial subjects:

This clinical study was designed and conducted in accordance with the ICH Harmonized Tripartite Guidelines for GCP, with applicable local regulations of the countries where the study was conducted, and with the ethical principles laid down in the Declaration of Helsinki.

Only patients who completed the FUTURE 1 study, who tolerated bosentan 32 mg dispersible tablets (pediatric formulation) during FUTURE 1 and for whom continuation of bosentan treatment was considered beneficial by the investigator, were offered the opportunity to participate in the FUTURE 1 Extension trial.

Background therapy:

The following concomitant medications were allowed at inclusion and during the study: calcium channel blockers, intravenous epoprostenol, intravenous or inhaled iloprost, anticoagulants, diuretics, digoxin

Evidence for comparator: -

Actual start date of recruitment	23 August 2005
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 15
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Netherlands: 6
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	United States: 7
Worldwide total number of subjects	36
EEA total number of subjects	28

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	36
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

36 Children (≥ 2 years and < 12 years) with idiopathic or familial pulmonary arterial hypertension were recruited from 11 centers across Europe and USA and enrolled in the FUTURE 1 trial (baseline). Only patients who completed FUTURE 1 ($n=34$) could be enrolled in FUTURE 2. Enrollment in FUTURE 2 started August 23, 2005.

Pre-assignment

Screening details:

The actual number of patients enrolled in FUTURE 2 was 33 because 2 patients did not complete FUTURE 1 and one patient completed FUTURE 1 but was not enrolled in FUTURE 2.

Period 1

Period 1 title	Overall trial (FUTURE 1 + FUTURE 2) (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

In this open-label extension trial, all subjects received the pediatric formulation of bosentan according to the core (FUTURE 1) study drug regimen, with the aim to determine its long term safety.

Arms

Are arms mutually exclusive?	Yes
Arm title	Patients with previous bosentan

Arm description:

This group included patients who already received bosentan (film-coated tablets) before enrollment in FUTURE 1, and then received the pediatric formulation of bosentan during FUTURE 1 and FUTURE 2 (see "Dosage and administration details" of the investigational medicinal compound).

Note: In this single arm trial, data are presented according to whether patients received bosentan or not before enrollment in FUTURE 1 but all the subjects received the study drug according to the same regimen.

Arm type	Experimental
Investigational medicinal product name	Bosentan
Investigational medicinal product code	ACT-050088
Other name	
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

Dosage and administration details:

The pediatric formulation of bosentan was initiated at a dose of 2 mg/kg b.i.d. for 4 weeks, then uptitrated to the maintenance dose of 4 mg/kg b.i.d. for the next 8 weeks of the FUTURE 1 trial (AC-052- 365) and to be continued in FUTURE 2. The dose could be down-titrated to 2 mg/kg b.i.d. if not tolerated. The body weight-adjusted dose of the dispersible tablet was dispersed in a teaspoon of water (not mixed with food) before being administered orally.

Arm title	Bosentan-naive Patients
------------------	-------------------------

Arm description:

This group included patients who were not treated with bosentan before enrollment in FUTURE 1, and received the pediatric formulation of bosentan during FUTURE 1 and FUTURE 2 (see "Dosage and administration details" of the investigational medicinal compound).

Note: In this single arm trial, data are presented according to whether patients received bosentan or not before enrollment in FUTURE 1 but all the subjects received the study drug according to the same regimen.

Arm type	Experimental

End points

End points reporting groups

Reporting group title	Patients with previous bosentan
-----------------------	---------------------------------

Reporting group description:

This group included patients who already received bosentan (film-coated tablets) before enrollment in FUTURE 1, and then received the pediatric formulation of bosentan during FUTURE 1 and FUTURE 2 (see "Dosage and administration details" of the investigational medicinal compound).

Note: In this single arm trial, data are presented according to whether patients received bosentan or not before enrollment in FUTURE 1 but all the subjects received the study drug according to the same regimen.

Reporting group title	Bosentan-naïve Patients
-----------------------	-------------------------

Reporting group description:

This group included patients who were not treated with bosentan before enrollment in FUTURE 1, and received the pediatric formulation of bosentan during FUTURE 1 and FUTURE 2 (see "Dosage and administration details" of the investigational medicinal compound).

Note: In this single arm trial, data are presented according to whether patients received bosentan or not before enrollment in FUTURE 1 but all the subjects received the study drug according to the same regimen.

Subject analysis set title	All-treated set
----------------------------	-----------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

All patients (bosentan-naïve patients and patients treated with film-coated bosentan tablets before enrollment) who received at least one dose of study drug (dispersible bosentan tablets) in the combined FUTURE 1 / FUTURE 2 trial periods.

Primary: Change from baseline to end of study (EOS) in systolic blood pressure (SBP)

End point title	Change from baseline to end of study (EOS) in systolic blood pressure (SBP) ^[1]
-----------------	--

End point description:

The main study objective was to assess the long-term safety of bosentan in children with PAH, including changes from baseline in blood pressure.

Only subjects with non missing data at both time points were considered.

End point type	Primary
----------------	---------

End point timeframe:

From baseline (FUTURE 1) up to end of study or premature study treatment discontinuation (FUTURE 1 or FUTURE 2)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This was an exploratory study; no statistical hypothesis was set and only descriptive analyses were performed

End point values	Patients with previous bosentan	Bosentan-naïve Patients	All-treated set	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	10	14	24	
Units: mmHg				
median (full range (min-max))				
SBP at baseline	101.5 (87 to 115)	104 (79 to 121)	102.5 (79 to 121)	
SBP change from baseline to EOS	-10.5 (-20 to 25)	4 (-21 to 28)	-4.5 (-21 to 28)	

Statistical analyses

No statistical analyses for this end point

Primary: Change from baseline to end of study (EOS) in diastolic blood pressure (DBP)

End point title	Change from baseline to end of study (EOS) in diastolic blood pressure (DBP) ^[2]
-----------------	---

End point description:

The main study objective was to assess the long-term safety of bosentan in children with PAH, including changes from baseline in blood pressure.

Only subjects with non missing data at both time points were considered.

Pulse rate: change from baseline to EOS	-11 (-46 to 36)	-10 (-30 to 11)	-11 (-46 to 36)	

Statistical analyses

No statistical analyses for this end point

Primary: Change from baseline to end of study (EOS) in body weight

End point title	Change from baseline to end of study (EOS) in body weight ^[4]
-----------------	--

End point description:

The main study objective was to assess the long-term safety of bosentan in children with PAH, including growth as measured by changes from baseline in body weight and height.

End point type	Primary
----------------	---------

End point timeframe:

From baseline (FUTURE 1) up to end of study or premature study treatment discontinuation (FUTURE 1 or FUTURE 2)

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This was an exploratory study; no statistical hypothesis was set and only descriptive analyses were performed

End point values	Patients with previous bosentan	Bosentan-naïve Patients	All-treated set	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	10	14	24	
Units: kg				
median (full range (min-max))				
Weight at baseline	19.6 (12.5 to 30.2)	21.6 (11 to 39)	19.6 (11 to 39)	
Weight change from baseline to EOS	8.2 (5 to 24.8)	8.5 (1.8 to 18.5)	8.3 (1.8 to 24.8)	

Statistical analyses

Primary: Change from baseline to end of study (EOS) in height for age

End point title	Change from baseline to end of study (EOS) in height for age ^[5]
-----------------	---

End point description:

The main study objective was to assess the long-term safety of bosentan in children with PAH, including growth as measured by changes from baseline in body weight and height.

For each patient, height was put in the perspective of the height of healthy children of the same age according to the WHO growth standards.

End point type	Primary
----------------	---------

End point timeframe:

From baseline (FUTURE 1) up to end of study or premature study treatment discontinuation (FUTURE 1 or FUTURE 2)

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This was an exploratory study; no statistical hypothesis was set and only descriptive analyses were performed

End point values	Patients with previous bosentan	Bosentan-naïve Patients	All-treated set	
Subject group type	Reporting group	Reporting group	Subject analysis set

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From study drug initiation up to 1 day after study drug discontinuation (up to 28 days after study drug discontinuation for serious adverse events)

Adverse event reporting additional description:

Four deaths occurred during this time frame and two other deaths (1 due to PAH and cardiac complications and 1 during cardiac catheterization; not listed below) occurred later (38 days and 11 months after study drug discontinuation, respectively).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 August 2008	The purpose of this amendment is to adjust the monitoring schedule during this open label extension study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

In 3 patients new therapy was initiated in spite of absence of clinical worsening, reflecting a changing treatment paradigm towards combination therapy. The patients were kept in the time to PAH worsening analyses.

Notes:
