

Clinical trial results:

A multicentre study to assess the safety and efficacy of sodium hyaluronate (Hyalgan-F) produced by fermentation in knee osteoarthritis.

Summary

EudraCT number	2005-002735-27
Trial protocol	LV
Global end of trial date	13 June 2006

Results information

Result version number	v1
This version publication date	02 April 2022
First version publication date	02 April 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 June 2006
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 June 2006
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the potential immunogenicity of Hyalgan-F (HA-F) a sodium hyaluronate obtained by fermentation and administered by intra-articular (i.a.) route (5 i.a., once a week for 5 weeks) in a patients with knee osteoarthritis (OA).

Protection of trial subjects:

Females of child-bearing potential (i.e. not in menopausal status from at least one year or permanently sterilized) had to have a negative urine pregnancy test prior to the first investigational medicinal product (IMP) administration

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	29 September 2005
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Scientific research
Long term follow-up duration	5 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Latvia: 120
Worldwide total number of subjects	120
EEA total number of subjects	120

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	120
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

- Patients of both genders, ambulant, aged ≥ 40 years, with primary knee OA associated with moderate to severe knee pain.
- Diagnosis of OA of the knee according to ACRC.
- OA of KL grade II – III
- At baseline VAS pain score ≥ 40 mm
- Analgesic/NSAID therapy was discontinued if previously taken prior to baseline

Pre-assignment period milestones

Number of subjects started	120
Number of subjects completed	120

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Hyalgan-F (HA-F)
-----------	------------------

Arm description:

Patients were treated with five i.a. injections of HA-F 2 ml, one injection a week for five weeks, starting from baseline [week 0]) up to six months of follow-up with clinical visits and evaluations.

Arm type	One arm
Investigational medicinal product name	Hyalgan-F
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in pre-filled syringe
Routes of administration	Intraarticular use

Dosage and administration details:

Hyalgan-F 20mg/2ml	
Sodium Hyaluronate	20 mg
Sodium chloride	17 mg
Monobasic sodium phosphate	0.1 mg
Dibasic sodium phosphate	1.2 mg
Water for injection q.s. to	2 ml

Number of subjects in period 1	Hyalgan-F (HA-F)
Started	120
Completed	117
Not completed	3
Adverse event, serious fatal	1

Did not meet inclusion criteria	1
Lost to follow-up	1

End points

End points reporting groups

Reporting group title	Hyalgan-F (HA-F)
Reporting group description: Patients were treated with five i.a. injections of HA-F 2 ml, one injection a week for five weeks, starting from baseline [week 0]) up to six months of follow-up with clinical visits and evaluations.	
Subject analysis set title	mITT 35 days
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: The Modified Intention to Treat population (ITT) was defined as all patients who received at least one dose of the study drug with at least one post-treatment immunological data, and was used for all the immunological and efficacy analyses.	
Subject analysis set title	mITT 60 days
Subject analysis set type	Modified intention-to-treat
Subject analysis set description: The Modified Intention to Treat population (ITT) was defined as all patients who received at least one dose of the study drug with at least one post-treatment immunological data, and was used for all the immunological and efficacy analyses.	

Primary: Immunogenic response of HA-F

End point title	Immunogenic response of HA-F
End point description:	
End point type	Primary
End point timeframe: The incidence of positive immunogenic response to HA-F calculated at 35 days and 60 days after treatment among patients with a negative immunogenic response at baseline	

End point values	Hyalgan-F (HA-F)	mITT 35 days	mITT 60 days	
Subject group type	Reporting group	Subject analysis set	Subject analysis set	
Number of subjects analysed	117	119	117	
Units: Percentage protective dose				
number (not applicable)	117	119	117	

Statistical analyses

Statistical analysis title	Statistical Analysis
Comparison groups	Hyalgan-F (HA-F) v mITT 60 days v mITT 35 days
Number of subjects included in analysis	353
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.05
Method	Chi-squared

Confidence interval	
level	95 %
sides	1-sided

Secondary: Patient evaluation of knee pain after 50 ft walk (0-100 mm VAS scale)

End point title	Patient evaluation of knee pain after 50 ft walk (0-100 mm VAS scale)
-----------------	---

End point description:

Results were summarized descriptively for each visit (Day 0, Day 35, Day 60, Day 120, and Day 180). The change from baseline was analyzed and the corresponding 95% CIs were presented. P-values were obtained from a two-sided test of the null-hypothesis that the change from baseline was zero. The time taken to perform the 50 ft walking test was also reported.

End point type	Secondary
----------------	-----------

End point timeframe:

The VAS was evaluated at baseline, Day 35, Day 60, Day 120 and Day 180.

End point values	Hyalgan-F (HA-F)			
Subject group type	Reporting group			
Number of subjects analysed	119			
Units: millimetre(s)				
number (not applicable)	119			

Statistical analyses

No statistical analyses for this end point

Secondary: Immunological Parameters

End point title	Immunological Parameters
-----------------	--------------------------

End point description:

At baseline and at Day 35 (one week after the fifth i.a. injection) and Day 60 (one month after fifth i.a. injection) other blood samples of the patients were collected for:

- C3 and C4 quantification
- CH50
- AH50 determination

End point type	Secondary
----------------	-----------

End point timeframe:

At baseline, Day 35 and Day 60

Statistical analyses

No statistical analyses for this end point

Secondary: WOMAC index assessment.

End point title	WOMAC index assessment.
-----------------	-------------------------

End point description:

Results were summarized descriptively for each visit (Day 0, Day 35, Day 60, Day 120, and Day 180). The change from baseline was analyzed and the corresponding 95% CIs were presented. P-values were obtained from a two-sided test of the null-hypothesis that the change from baseline was zero. The time taken to perform the 50 ft walking test was also reported.

End point type	Secondary
----------------	-----------

End point timeframe:

The WOMAC was measured at baseline, Day 35, Day 60, Day 120, and Day 180.

Statistical analyses

No statistical analyses for this end point

Secondary: Patient's global assessment

End point title	Patient's global assessment
-----------------	-----------------------------

End point description:

. Both patients and investigators were asked to assess the overall condition of the patient (using the Global Assessment) and to judge the overall effectiveness of the study medication. Patients' and investigators' global assessments, evaluated from Day 35 to Day 180

End point type	Secondary
----------------	-----------

End point timeframe:

Patients' and investigators' global assessments, evaluated at baseline, Day 35, Day 60, Day 120, and day 180.

Statistical analyses

No statistical analyses for this end point

Secondary: Patients' and Investigators' Overall Effectiveness Judgments

End point title	Patients' and Investigators' Overall Effectiveness Judgments
-----------------	--

End point description:

Patients' and investigators' overall effectiveness judgments, evaluated after Day 35 for the modified ITT population, using five different response categories

End point type	Secondary
----------------	-----------

End point timeframe:

Patients' and Investigators' Overall Effectiveness Judgments were evaluated at baseline, Day 35, Day 60, Day 120, and Day 180.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The time period for recording AE was from Baseline V2 Day 0 to V10 Day 180

Assessment type	Systematic
