

Clinical trial results:

ADJUVANT TREATMENT OF FULLY RESECTED STAGE III COLON CANCER WITH FOLFOX-4 VERSUS FOLFOX-4 PLUS CETUXIMAB

Tratamiento adyuvante con FOLFOX-4 versus FOLFOX-4 + cetuximab para el cáncer de colon en estadio III extirpado completamente

Summary

EudraCT number	2005-003463-23

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2012
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 June 2011
Global end of trial reached?	Yes
Global end of trial date	15 October 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to assess and to compare the disease free survival curves according to treatment arm in completely resected stage III colon cancer.

Protection of trial subjects:

The study was done in accordance with the Declaration of Helsinki (amended 2000) and the International Conference on Harmonization of Technical Requirements of Pharmaceuticals for Human Use (ICH) Note for Guidance on Good Clinical Practice and approved by the appropriate Ethics Committees.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 December 2005
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Portugal: 72
Country: Number of subjects enrolled	Spain: 666
Country: Number of subjects enrolled	United Kingdom: 70
Country: Number of subjects enrolled	Austria: 127
Country: Number of subjects enrolled	Belgium: 205
Country: Number of subjects enrolled	Denmark: 28
Country: Number of subjects enrolled	France: 794
Country: Number of subjects enrolled	Germany: 278
Country: Number of subjects enrolled	Italy: 319
Worldwide total number of subjects	2559
EEA total number of subjects	2489

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1711
From 65 to 84 years	848
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Between Dec 22, 2005, and Nov 5, 2009, 2559 patients were enrolled from 340 sites in Europe and randomly assigned to treatment (2096 were randomised before June 17, 2008).

Pre-assignment

Screening details:

After checking the inclusion and non-inclusion criteria, patients were randomized to the protocol. We did this open-label randomised, controlled, multinational phase 3 study in patients aged between 18 and 75 years with pathologically confirmed stage III colon adenocarcinoma.

Period 1

Period 1 title	Randomized (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Open-label study

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	FOLFOX4 plus Cetuximab
------------------	------------------------

Arm description:

Patients received FOLFOX4 every 2 weeks (1 cycle): 85 mg/m² oxaliplatin (2 h infusion) on day 1, 200 mg/m² leucovorin on days 1 and 2, followed by 400 mg/m² fluorouracil (bolus), then 600 mg/m² fluorouracil (continuous infusion during 22 h), with weekly cetuximab, which was given on day 1, 400 mg/m² (2 h infusion) the first week, then every week at 250 mg/m² (1 h infusion) for subsequent infusions. Treatment was continued for 12 cycles. Patients discontinued after completion of study treatment, occurrence of an unacceptable toxic effect, any disease recurrence, or withdrawal of consent.

Arm type	Experimental
Investigational medicinal product name	FOLFOX4
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

FOLFOX4 every 2 weeks (1 cycle): 85 mg/m² oxaliplatin (2 h infusion) on day 1, 200 mg/m² leucovorin on days 1 and 2, followed by 400 mg/m² fluorouracil (bolus), then 600 mg/m² fluorouracil (continuous infusion during 22 h).

Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Weekly cetuximab, which was given on day 1, 400 mg/m² (2 h infusion) the first week, then every week at 250 mg/m² (1 h infusion) for subsequent infusions.

Arm title	FOLFOX4
------------------	---------

Arm description:

Patients received FOLFOX4 every 2 weeks (1 cycle): 85 mg/m² oxaliplatin (2 h infusion) on day 1, 200 mg/m² leucovorin on days 1 and 2, followed by 400 mg/m² fluorouracil (bolus), then 600 mg/m² fluorouracil (continuous infusion during 22 h). Treatment was continued for 12 cycles. Patients

discontinued after completion of study treatment, occurrence of an unacceptable toxic effect, any disease recurrence, or withdrawal of consent.

Arm type	Active comparator
Investigational medicinal product name	FOLFOX4
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

FOLFOX4 every 2 weeks (1 cycle): 85 mg/m² oxaliplatin (2 h infusion) on day 1, 200 mg/m² leucovorin on days 1 and 2, followed by 400 mg/m² fluorouracil (bolus), then 600 mg/m² fluorouracil (continuous infusion during 22 h).

Number of subjects in period 1^[1]	FOLFOX4 plus Cetuximab	FOLFOX4
Started	791	811
Completed	785	805
Not completed	6	6
Kras mutated tumor	1	-
Not treated Patients	5	4
Kras Mutated Tumours	-	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The presented results are on the target population meaning the Kras Wild-type treated patients that is why numbers are different from the baseline period. Some patients were in fact Kras mutated patients or some were never treated.

Subject analysis sets

Subject analysis set title	Kras Exon 2 Wild-type population
----------------------------	----------------------------------

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

All randomized KRAS wild-type patients with signed (Main and KRAS) Informed Consent Forms will be included in this analysis set, in the treatment arm assigned at randomization, irrespective of the

treatment actually received, and irrespective of the violation of baseline eligibility criteria, other protocol deviations or the availability of post-randomization data.

This population set will be used for the primary analyses of all primary and secondary efficacy variables.

Date	Amendment
25 June 2007	<p>Correction of participating countries, provision of details of all involved groups and country coordinating investigators (changed for Austria and Germany)</p> <p>Provision of clear definitions of the conditions to be fulfilled and the expected time points for primary and final analyses, clarification of definition of end of trial</p> <p>Clarification of visit and assessment schedule</p> <p>At the request of the IDMC, introduction of electrolyte measurement at baseline, 3 months, 6 months after start of treatment, at the end of treatment Visit and at the second follow-up visit (12 months after surgery) if still abnormal</p> <p>Clarification of time intervals for colonoscopy</p> <p>Update of pretreatment recommendations before cetuximab administrations: addition of corticosteroid</p> <p>Clarification of dosage reduction and treatment continuation rules</p> <p>Harmonization of description of the adverse events page with the CRF</p> <p>Update of informed consent based on changes introduced by this amendment (main study and for translational research)</p> <p>Update of planned statistical analyses</p> <p>Correction of errors</p>
30 April 2008	<p>* Addition of a second primary objective, namely the comparison of treatments in patients with KRAS wild type tumors</p> <ul style="list-style-type: none">• Adjustment of the risk reduction (hazard ratio) expected from the addition of cetuximab, in the entire study population.• Implementation of one interim analysis for the entire study population and one for the population of patients with KRAS wild type tumors• Increase of the total sample size from 2000 to 2842 patients to achieve the necessary number of events for the primary statistical analysis within a reasonable time frame, considering the adjustments of the individual alpha required because of two primary endpoints and the implementation of interim analysis and the need to maintain the original power of 90%.• Update of the planned statistical analyses and related assumptions, considering the additional primary objective• Introduction of retrospective KRAS assessment in all patients• Clarification of time interval between curative R0 resection and start of treatment• Update of the Patient Information based on introduction of KRAS assessment (main study)• Update of the handling instructions and compatibility of cetuximab with various infusion set materials

14 August 2008	<ul style="list-style-type: none"> • Introduction of an inclusion criterion regarding KRAS status. • Introduction of prospective KRAS assessment in all new patients. The specific logistics are described in a separate document. • The only primary objective will be the comparison of disease free survival (DFS) between the two treatment arms in the population of patients with KRAS wild-type tumors. • Addition of a new secondary objective, namely the comparison of DFS in the entire population of all patients randomized up to 24:00h, 17 June 2008 (to be performed only if a significant effect on DFS, in the KRAS wild-type population is seen). • Interim analysis only for the primary objective in patients with a KRAS wild-type tumor. • In total 2099 patients have been included until the recruitment stop on 17 June 2008, of whom an estimated 957 patients have assessable KRAS wild-type tumors. An additional 450 patients with a KRAS wild-type tumor should be included to achieve the necessary number of events for the primary statistical analysis, within a reasonable time frame. Therefore, it is estimated that 825 patients will need to be assessed for the KRAS status of their tumors after the restart of patient enrollment (assuming 57.5% will be KRAS wild-type and there will be 5% withdrawals, for other reasons, prior to randomization). • Prolongation of the survival follow-up to 7 years after randomization of the last patient (i.e. 10.5 years in total assuming a recruitment period of 3.5 years). • Update of the planned statistical analyses and related assumptions, considering the population change for primary analysis. • Update of the Patient Information based on introduction of KRAS assessment (main study) and introduction of a new patient information and informed consent necessary for the prescreening of patients for KRAS status. • Update of Translational Research sections • Corrections of errors
30 June 2009	<p>Change of an inclusion criterion regarding the age of the patients. The FFCD has decided to follow the additional DSMB recommendations regarding patients aged 71 or older which has strongly recommended taking a precautionary measure, no longer to include patients aged 71 or older (at screening), because of an increased risk of toxicity or death observed in the population > 70 years old in the PETACC8 study as compared to the population < 71 years old, whatever the treatment arm is. Furthermore, these results are in line with the analysis of the ACCENT database presented at the main ASCO meeting (2009) that support the use of 5-FU-based regimens without Oxaliplatin in elderly patients >70 years old (McCleary et al., ASCO 2009).</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
