

Clinical trial results:

A Phase II Study of Lapatinib for Brain Metastases in Subjects with ErbB2-Positive Breast Cancer Following Trastuzumab-based Systemic Therapy and Cranial Radiotherapy

Summary

EudraCT number	2005-003944-68
Trial protocol	SE AT DE GB BE ES GR IT
Global end of trial date	15 March 2018

Results information

Result version number	v1 (current)
This version publication date	30 March 2019
First version publication date	30 March 2019

Trial information

Trial identification

Sponsor protocol code	EGF105084

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 March 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 March 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Determine central nervous system (CNS) objective response rate to lapatinib monotherapy in subjects with progressive brain metastases from human epidermal growth factor receptor 2 (HER2/ErbB2)-overexpressing breast cancer

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 December 2005
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 8
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	France: 26
Country: Number of subjects enrolled	Germany: 18
Country: Number of subjects enrolled	Greece: 10
Country: Number of subjects enrolled	Australia: 18
Country: Number of subjects enrolled	India: 2
Country: Number of subjects enrolled	Italy: 9
Country: Number of subjects enrolled	Japan: 6
Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	Sweden: 4
Country: Number of subjects enrolled	Switzerland: 5
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	United Kingdom: 10
Country: Number of subjects enrolled	United States: 92
Worldwide total number of subjects	242
EEA total number of subjects	107

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	220
From 65 to 84 years	21
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

The Intent-to-Treat (ITT) Population: all subjects who received at least one dose of study medication

Modified ITT (MITT) Population: all subjects who received at least four doses (750 mg lapatinib twice daily for two days) of study medication and who had measurable brain metastases (≥ 1 cm in diameter) at baseline assessment

Pre-assignment

Screening details:

Main phase: ITT 95 in Cohort A, 147 in Cohort B. MITT, 94 in Cohort A, and 143 subjects in Cohort B
Optional open-label extension phase: 51 subjects. Long-term follow up (LTFU) Protocol amendment added on 15-Apr-2013

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A

Arm description:

750mg lapatinib administered orally twice daily. Cohort A subjects had Eastern Cooperative Oncology Group (ECOG) performance status 0-1, and one or two prior trastuzumab-containing regimens, in total, for treatment of breast cancer in adjuvant and/or metastatic settings

Arm type	Experimental
Investigational medicinal product name	lapatinib
Investigational medicinal product code	EGF105
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Cohort A subjects had Eastern Cooperative Oncology Group (ECOG) performance status 0-1

Arm title	Cohort B
------------------	----------

Arm description:

750mg lapatinib administered orally twice daily. Cohort B subjects had ECOG performance status 2 or more than 2 prior trastuzumab-containing regimens for treatment of breast cancer in the adjuvant and/or metastatic settings.

Arm type	Experimental
Investigational medicinal product name	lapatinib
Investigational medicinal product code	EGF105
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

750mg lapatinib administered orally twice daily. Cohort B subjects had ECOG performance status 2 or more than 2 prior trastuzumab-containing regimens

Number of subjects in period 1	Cohort A	Cohort B
Started	95	147
Completed	14	15
Not completed	81	132
Adverse event, serious fatal	54	90
sponsor terminated study	-	1
Consent withdrawn by subject	3	4
coma; disease progression; unknown	10	11
Investigator decision	7	15
Lost to follow-up	7	10
Protocol deviation	-	1

Primary: Central nervous system (CNS) objective response rate

End point title	Central nervous system (CNS) objective response rate ^[1]
End point description: Summary of CNS Objective Response (Lapatinib Monotherapy - MITT Population) Response to lapatinib in patients with progressive brain metastases from ErbB2-overexpressing breast cancer. The primary indicator of drug efficacy was CNS objective response rate. A CNS objective response was defined as either a Complete response (CR) or Partial response (PR), as assessed by volumetric analysis of brain Magnetic resonance imaging (MRI), provided there was no progression of systemic disease outside of the CNS, increasing steroid requirements, or worsening of Neurological signs and symptoms (NSS) A CNS objective response rate was defined as a 50% volumetric reduction in sum of CNS target lesions, with no new or progressive CNS or non-CNS lesions, no increases in tumor-related steroid requirements and no worsening of neurological signs or symptoms	
End point type	Primary
End point timeframe: time from baseline to data cutoff (25 Sept 2007); approximately 2 years	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were planned for primary endpoint

End point values	Cohort A	Cohort B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	94	143		
Units: participants				
Complete response (CR)	0	0		
Partial response (PR)	6	9		
Stable disease (SD)	40	46		
Progressive disease (PD)	40	70		
Unknown	8	18		

Statistical analyses

No statistical analyses for this end point

No statistical analyses for this end point

Secondary: Percentage of Participants with Improvement in neurological signs and symptoms (NSS) measured using the Neurological Examination Worksheet

End point title	Percentage of Participants with Improvement in neurological signs and symptoms (NSS) measured using the Neurological Examination Worksheet
-----------------	--

End point description:

Physician-reported NSS worksheet is derived from 13 AEs and measured by NCI CTCAE v3.0 grouped into 7 categories: level of consciousness, neurological symptoms, cranial nerves, language, strength, sensation, and ataxia. Improvement of NSS required all of the following: Decrease by 1 or more grades from baseline of any tumor-related NSS, with confirmation at least 4 wks later, No development or worsening in any tumor-related NSS during interval, No radiographic evidence of CNS progression (assessed by volumetric MRI) or systemic (non-CNS) progression (assessed by RECIST) during interval, Stable or decreasing steroids during interval as defined by GSK equivalent doses of an alternative corticosteroid or a dose increase for non-tumor related reasons (e.g., asthma) didn't constitute a steroid increase. Improvement in any non-tumor associated NSS didn't constitute improvement in NSS. Neurological exam, using Neurological Examination Worksheet was assessed at baseline and each 4 weeks

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All Adverse events are reported in this record from First Patient First Treatment until Last Patient Last Visit.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 October 2005	Amendment 01 (13-Oct-2005) - Country specific amendment for Germany and Poland to remove the requirement for specialized radiological assessments using positron emission tomography (PET).
21 December 2005	Amendment 02 (21-Dec-2005) – Country specific amendment for Japan to (1) add a pharmacokinetic component to the protocol (2) add a Go/No Go decision based on dose limiting toxicities in first 6 Japanese subjects (3) remove option to enroll into an open-label extension phase (lapatinib combination therapy) and (4) elect as an option, on a site basis, the specialized radiological assessments using positron emission tomography (PET)
19 June 2006	Amendment 03 (19-Jun-2006) – Optional protocol extension added for subjects on monotherapy lapatinib who develop disease progression in the CNS, to receive the combination of lapatinib and capecitabine, protocol clarifications added throughout.
22 January 2007	Amendment 04 (22-Jan-2007) – Country specific amendment for Japan, to allow the trial to remain open in Japan beyond the full-enrollment closure globally, in order to allow the participation of at least 6 Japanese subjects and the collection of PK and safety data.
29 May 2008	Amendment 05 (29-May-2008) –Additional safety information and treatment guidelines related to hepatotoxicity added.
29 August 2012	<p>Amendment 06 (29-Aug-2012)</p> <ul style="list-style-type: none">- Discontinuation of many specific efficacy and safety assessments. The study was stopped for subjects in post treatment follow up. Continued access to study treatment lapatinib was permitted for subject ongoing at the time of implementation of this amendment.- Update to Prohibited Medications was added- Extension phases of the study were removed <p>This amendment was not circulated outside Sponsor (GSK) and later replaced by Protocol Amendment 07 which re-instated the extension phase of the study.</p>
15 April 2013	<p>Protocol Amendment 07 was implemented to discontinue collection of many study-specific assessments while allowing the one subject receiving treatment to have continued access to the treatment until the occurrence of unacceptable toxicity or disease progression (as determined by the investigator).</p> <p>Amendment 07 (15-Apr-2013), introduced the following changes:</p> <ul style="list-style-type: none">- Re-instated the Extension phase of the study- Continued access to treatment under one of the extension phases permitted.- Reduced the number of study assessments in the extension phases.- Updated information on LAP016A2305/EGF111438 results added to align with Supplement 01 of Lapatinib Investigator's Brochure version 13- Updated safety guidelines<ul style="list-style-type: none">- Addition of the efficacy results of the Study EGF111438 interim analysis (CSR dated 16-Oct-2012) <p>Amendment 08 (03-Oct-2016), introduced the following changes:</p> <ul style="list-style-type: none">- Deleted or replaced references to GSK or its staff with that of Novartis and its authorized agents.- Administrative changes to align with Novartis processes and procedures.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

3 objectives not in protocol were initially registered in error. There was no analysis of these outcomes and there should not have been 2 participants were counted twice when they moved from one site to another. 1 in Japan and 1 in US. Actual global

Notes:
