

Clinical trial results:

Randomized Multicenter Trial Comparing Valganciclovir CMV Prophylaxis Versus Pre-emptive Therapy after Renal Transplantation Using Proteomics for Monitoring of Graft Alteration

Summary

EudraCT number	2005-004695-20
Trial protocol	DE AT
Global end of trial date	26 October 2015

Results information

Result version number	v1 (current)
This version publication date	22 April 2017
First version publication date	22 April 2017

Trial information

Trial identification

Sponsor protocol code	ML19313
-----------------------	---------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00372229
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 October 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 October 2015
Global end of trial reached?	Yes
Global end of trial date	26 October 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the incidence of cytomegalovirus (CMV) disease and corresponding renal graft alteration.

Protection of trial subjects:

All study subjects were required to read and sign an informed consent form.

Background therapy:

Subjects received immunosuppression with a calcineurin inhibitor (CNI; (cyclosporine A or tacrolimus), mycophenolate mofetil (MMF) and steroids, with dosing according to study center practice.

Evidence for comparator: -

Actual start date of recruitment	31 May 2006
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	7 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 23
Country: Number of subjects enrolled	Germany: 276
Worldwide total number of subjects	299
EEA total number of subjects	299

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	234
From 65 to 84 years	65

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

342 subjects were screened, and 43 subjects were not randomized. Central randomization stratified by study center and by induction immunosuppression with polyclonal antibodies, such as anti-thymocyte globuline (ATG), anti-lymphocyte globulin (ALG), or Muromonab-CD3 was performed.

Period 1

Period 1 title	Study Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Valganciclovir CMV Prophylaxis

Arm description:

900 mg valganciclovir, taken orally once daily, adjusted to renal function starting within 14 days of transplantation until Day 100 after transplantation.

Arm type	Experimental
Investigational medicinal product name	Valganciclovir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

900 mg valganciclovir, taken orally once daily, adjusted to renal function starting within 14 days of transplantation until Day 100 after transplantation.

Arm title	Pre-emptive CMV Therapy
------------------	-------------------------

Arm description:

If plasma polymerase chain reaction (PCR) \geq 400 CMV copies/millilitre, then 1800 mg valganciclovir per day adjusted to renal function for at least 14 days until the second negative PCR (below 400 copies/ml) followed by secondary prophylaxis for 28 days with 900 mg valganciclovir adjusted to renal function. If CMV disease or no response to valganciclovir treatment after 14 days (not falling viral load), then intravenous (IV) ganciclovir or additional appropriate therapy could have been administered according to the local site's standard, instead of valganciclovir.

Arm type	Experimental
Investigational medicinal product name	Valganciclovir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

If plasma polymerase chain reaction (PCR) \geq 400 CMV copies/millilitre, then 1800 mg valganciclovir per day adjusted to renal function for at least 14 days until the second negative PCR (below 400 copies/ml) followed by secondary prophylaxis for 28 days with 900 mg valganciclovir adjusted to renal function.

Investigational medicinal product name	Ganciclovir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

If CMV disease or no response to valganciclovir treatment after 14 days (not falling viral load), then intravenous (IV) ganciclovir or additional appropriate therapy could have been administered according to the local site's standard, instead of valganciclovir.

Number of subjects in period 1	Valganciclovir CMV Prophylaxis	Pre-emptive CMV Therapy
Started	148	151
Completed	117	122
Not completed	31	29
Graft loss	-	3
Protocol violation	3	4
Subject died	3	2
Refused treatment/did not cooperate	3	1
Lost to follow-up	3	3
Reason not specified	3	2
Consent withdrawn	16	14

Period 2

Period 2 title	Follow-Up Phase
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Valganciclovir CMV Prophylaxis (Follow-Up)

Arm description:

900 mg valganciclovir, taken orally once daily, adjusted to renal function starting within 14 days of transplantation until Day 100 after transplantation.

Arm type	Experimental
Investigational medicinal product name	Valganciclovir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

900 mg valganciclovir, taken orally once daily, adjusted to renal function starting within 14 days of transplantation until Day 100 after transplantation.

Arm title	Pre-emptive CMV Therapy (Follow-Up)
------------------	-------------------------------------

Arm description:

If plasma polymerase chain reaction (PCR) \geq 400 CMV copies/millilitre, then 1800 mg valganciclovir per day adjusted to renal function for at least 14 days until the second negative PCR (below 400 copies/ml) followed by secondary prophylaxis for 28 days with 900 mg valganciclovir adjusted to renal function. If CMV disease or no response to valganciclovir treatment after 14 days (not falling viral load), then intravenous (IV) ganciclovir or additional appropriate therapy could have been administered according to the local site's standard, instead of valganciclovir.

Arm type	Experimental
Investigational medicinal product name	Valganciclovir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

If plasma polymerase chain reaction (PCR) \geq 400 CMV copies/millilitre, then 1800 mg valganciclovir per day adjusted to renal function for at least 14 days until the second negative PCR (below 400 copies/ml) followed by secondary prophylaxis for 28 days with 900 mg valganciclovir adjusted to renal function.

Investigational medicinal product name	Ganciclovir
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

If CMV disease or no response to valganciclovir treatment after 14 days (not falling viral load), then intravenous (IV) ganciclovir or additional appropriate therapy could have been administered according to the local site's standard, instead of valganciclovir.

Primary: Percentage of Subjects with CMV Disease Within 12 months Including CMV Syndrome and Tissue Invasive Disease

End point title	Percentage of Subjects with CMV Disease Within 12 months Including CMV Syndrome and Tissue Invasive Disease
-----------------	---

End point description:

CMV disease comprises the two components of CMV syndrome as well as CMV tissue invasive disease. CMV syndrome was defined as viremia according to plasma PCR ≥ 400 copies/ml and at least one of the following signs: fever of ≥ 38 °C; new or increased malaise (malaise defined as normal activity reduced $>50\%$; cannot work or unable to care for self; leukopenia on 2 successive measurements separated by at least 24 hours thrombocytopenia; elevation of hepatic transaminases (alanine aminotransferase (ALT) or aspartate aminotransferase (AST) to at least 2 x upper limit of normal (ULN). CMV tissue invasive disease was defined as viremia according plasma PCR ≥ 400 copies/ml and clinical evidence of localized CMV infection (CMV inclusion cells or in situ detection of CMV antigen or deoxyribonucleic acid [DNA] by immunostaining or hybridization, respectively), cerebral spinal fluid [CSF]) and/or relevant symptoms or signs of organ dysfunction. Intent-to-treat (ITT) population.

Reporting groups

Reporting group title	Pre-emptive CMV Therapy
-----------------------	-------------------------

Reporting group description:

If plasma polymerase chain reaction (PCR) \geq 400 CMV copies/millilitre, then 1800 mg valganciclovir per day adjusted to renal function for at least 14 days until the second negative PCR (below 400 copies/ml) followed by secondary prophylaxis for 28 days with 900 mg valganciclovir adjusted to renal function. If CMV disease or no response to valganciclovir treatment after 14 days (not falling viral load), then intravenous (IV) ganciclovir or additional appropriate therapy could have been administered according to the local site's standard, instead of valganciclovir.

Reporting group title	Valganciclovir CMV Prophylaxis
-----------------------	--------------------------------

Reporting group description:

900 mg valganciclovir, taken orally once daily, adjusted to renal function starting within 14 days of transplantation until Day 100 after transplantation.

occurrences (all)	21	19	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 May 2006	Protocol Amendment 1 included revised study timelines; increased number of centers from 15 to 20; changes in laboratory parameters to be measured; changes in the clinical examination at Visit 1; viral load measured at central laboratory for all centers; and an increase in the adverse event reporting period from 12 to 14 months.
11 April 2008	Protocol Amendment 2 included changes in the study timelines, recruitment period, last subject at 12 months, last subject out and total study duration; increase in the number of centers to approximately 25; changes in exclusion criteria; changes in documentation of concomitant medication; changes in CMV measurements in follow-up phase; changes in packaging and labeling; safety precautions for handling of study drug; guidance for documentation of CMV infections, rejections, opportunistic infections, and adverse events in the electronic case report form; changes in serious adverse event reporting; and inclusion of two secondary basic research projects.
09 August 2010	Protocol Amendment 3 included the following changes: for withdrawn subjects, survival of the transplant and the subject could be followed up by telephone contact, if subject gave consent, according to the German data protection law; sample for proteomics was taken only until Month 24; and removal of one of the secondary basic research projects.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
