

Clinical trial results:

Phase III, randomised, double-blind, stratified comparative, placebo controlled, parallel group, multicentre study to assess the effect of deep subcutaneous injections of lanreotide Autogel 120 mg administered every 28 days on tumour progression free survival in patients with non functioning entero-pancreatic endocrine tumour.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 April 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	09 April 2013
Global end of trial reached?	Yes
Global end of trial date	09 April 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective is to assess the effect of lanreotide Autogel 120 mg administered every 28 days compared to placebo, on progression-free survival in patients with well or moderately differentiated non functioning entero-pancreatic endocrine tumour.

Protection of trial subjects:

This clinical study was designed and implemented and reported in accordance with the International Conference on Harmonisation (ICH) Harmonized Tripartite Guidelines for Good Clinical Practice (GCP), with applicable local regulations (including European Directive 2001/20/EC, US Code of Federal Regulations Title 21, and with the ethical principles laid down in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 June 2006
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	6 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Worldwide total number of subjects	204
EEA total number of subjects	170

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	111
From 65 to 84 years	91
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

264 subjects were screened at 48 investigational sites in 14 countries (Austria, Belgium, Czech Republic, Denmark, France, Germany, India, Italy, Poland, Slovakia, Spain, Sweden, United Kingdom and the United States of America). 204 subjects were randomised to receive study treatment in the Intent to treat (ITT) population.

Pre-assignment

Screening details:

A total of 264 subjects were screened for this study. There were 101 subjects randomised to receive lanreotide Autogel 120 mg and 103 subjects randomised to receive placebo. These 204 randomised subjects form the ITT population for analysis.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Two sets of individual sealed code break envelopes were prepared by an Ipsen Randomisation Manager to enable code break procedures of individual subjects without compromising the blind of the study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Lanreotide (Autogel Formulation)

Arm description:

120mg administered via deep subcutaneous injection every 28 days for a maximum period of 96 weeks.

Arm type	Experimental
Investigational medicinal product name	Lanreotide Autogel 120 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

120 mg

Arm title	Placebo
------------------	---------

Arm description:

Placebo: Saline solution 0.9% administered via deep subcutaneous injection every 28 days for a maximum period of 96 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo

End points

End points reporting groups

Reporting group title	Lanreotide (Autogel Formulation)
Reporting group description: 120mg administered via deep subcutaneous injection every 28 days for a maximum period of 96 weeks.	
Reporting group title	Placebo
Reporting group description: Placebo: Saline solution 0.9% administered via deep subcutaneous injection every 28 days for a maximum period of 96 weeks.	

Primary: Progression-Free Survival (PFS)

End point title	Progression-Free Survival (PFS) ^{[1][2]}
End point description: Time from randomization to first documentation of disease progression, or death. Disease progression centrally assessed using Response Evaluation Criteria in Solid Tumors (RECIST) v1.0 Analysis based on the intent-to-treat (ITT) population which comprised 204 randomised subjects. For the Lanreotide (Autogel Formulation) arm: Median (95% CI) was Not reached during the 96 week fixed duration study.	
End point type	Primary
End point timeframe: From randomisation up to the last tumour assessment (scheduled at 96 weeks). Radiological scans were performed every 12 weeks during the first year and every 24 weeks during the second year	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to system limitations, data is presented for single arm. Hence statistical analysis details could not be included.

Statistical analyses details: P-value: < 0.001, Method: Logrank, Hazard ratio (HR): 0.47, 95% Confidence interval level: (0.3, 0.73)

The log rank test was stratified according to progression status at baseline and prior therapy. No p-value adjustment for multiple comparisons.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: For the Lanreotide (Autogel Formulation) arm: Median (95% CI) was Not reached during the 96 week fixed duration study. Due to system limitations, data cannot be represented for this arm, hence this arm is not included.

End point values	Placebo			
Subject group type	Reporting group			
Number of subjects analysed	103			
Units: Weeks

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 January 2007	<p>Protocol Amendment 1</p> <ul style="list-style-type: none">• Inclusion criteria modification addition of subject with gastrinomas and tumours of unknown origin; extension of the window for the tumour biopsy.• Clarification on safety assessment (removal of local tolerance and disease progression from adverse event, role of the DSMC).• Clarification on procedures (blood sampling conditions and study drug injection).• Clarification on statistical definitions and testing.• Removal of plans for an interim analysis on the study and addition of a SSR.
30 July 2007	<p>Protocol Amendment 2</p> <ul style="list-style-type: none">• Modification of the inclusion criteria (tumour biopsy and CT-scan window• Specification about the randomisation list to be provided to the independent statistician in charge of reporting for DSMC.
30 April 2008	<p>Protocol Amendment 3</p> <ul style="list-style-type: none">• Introduction of the plan for an extension study to enable subjects to continue to receive lanreotide Autogel after completion of 96 weeks of treatment and to allow any subject that progressed while on placebo, to enter into the extension study. A request would be made by the Investigator for a potential code break due to centrally assessed disease progression confirmed by RECIST to verify subject's entry into the extension study.
04 April 2009	<p>Protocol Amendment 4</p> <ul style="list-style-type: none">• Change of saline solution in the United States of America.• Change of Sponsor name and address and of coordinating office name.
05 March 2010	<p>Protocol Amendment 5</p> <ul style="list-style-type: none">• Addition of hepatic tumour load evaluation on subject CT/MRI scan at baseline visit.• Removal of restriction regarding centres recruiting more than 20 subjects.• Addition of sensitivity analyses to investigate the robustness of the results of the primary efficacy analysis.
11 February 2011	<p>Protocol Amendment 6</p> <ul style="list-style-type: none">• Changes in response to US FDA to use the log rank test instead of the Cox PH model originally planned for the primary analysis of PFS, to follow up subjects for OS and to analyse OS as a secondary endpoint.• Planned update to CRF and ICF to collect OS data.• Change to the number of SSRs to one in response to advice from the FDA that this should be sufficient.
28 February 2012	<p>Protocol Amendment 7</p> <ul style="list-style-type: none">• To replace Ipsen Pharma S.A. with new laboratories, performing the PK evaluation and anti lanreotide antibody testing, due to site closure.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
