## General information about the trial

Main objective of the trial:

To determine if dose-intensifying (increase the 'dose-density') the adjuvant temozolomide component of the chemoradiation treatment enhances treatment efficacy as measured by overall survival

Protection of trial subjects:

RTOG DMC reviewed the accrual to the study and the rate of adverse events on the study at least twice a year until the initial results of the study have been presented to the scientific community. The efficacy results of this study were reviewed by the RTOG DMC four times

Number of subjects in period 1 <sup>[1]</sup>	Conventional Adjuvant TMZ	Dose-dense Adjuvant TMZ
	Started	411
Completed	411	420
Not completed	0	2
No follow-up collected	-	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 1173 patient were first registered, 1125 could start RT and concomitant TMZ. Adjuvant TMZ could start for 833 patients which were randomized between the two treatment arms. The dropout

reasons are explained in the pre-assignment section.

### Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected on a CRF to be submitted at pre-specified timepoint : (+give the different timepoint)

Adverse event reporting additional description:

CRF for AEs contains pre-specified items + additional boxes for all "other" AEs. (xx% AEs are reported as "other" and are not reported as not available from the list of SOC).

AEs are evaluated using CTC grading, SAEs using MedDra. Non-SAEs has not been collected specifically, all AEs will be reported in non-SAE section.
