

Clinical trial results:

Neoadjuvant trial of pre-operative exemestane or letrozole +/-celecoxib in the treatment of ER positive postmenopausal early breast cancer.

Summary

EudraCT number	2006-000436-27
Trial protocol	GB
Global end of trial date	02 March 2021

Results information

Result version number	v1 (current)
This version publication date	18 March 2022
First version publication date	18 March 2022

Trial information

Trial identification

Sponsor protocol code	BR3031
-----------------------	--------

Additional study identifiers

ISRCTN number	ISRCTN09768535
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 March 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 March 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine whether the addition of a COX2 inhibitor to an aromatase inhibitor results in greater objective clinical response, with acceptable toxicity, than an aromatase inhibitor alone.
Primary endpoint is objective clinical response (Complete Response, Partial Response) during neoadjuvant treatment.

Protection of trial subjects:

Patients taking medications thought to interact with study drugs with not eligible to take part.

A safety report was submitted annually to MHRA and MREC and all SUSARs were reported promptly.

The trial has both a Data Monitoring Committee and Trial Steering Committee which monitored the safety of trial participants.

Background therapy:

All trial participants have breast cancer surgery as appropriate, with radiotherapy if needed, following trial drug treatment.

Evidence for comparator:

A placebo was used as a comparator to celecoxib as this is an additional drug to standard treatment (hormone therapy).

Actual start date of recruitment	20 November 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Ethical reason, Regulatory reason, Scientific research
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 269
Worldwide total number of subjects	269
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	114
From 65 to 84 years	141
85 years and over	14

Subject disposition

Recruitment

Recruitment details:

269 patients took part in the trial between 11th November 2007 and 29th April 2014 at 22 UK hospitals.

Pre-assignment

Screening details:

It is unknown how many patients were pre-screened for eligibility at the hospital sites. Assessments required at trial screening were as per standard care so are likely to have taken place before consent. 269 participants were randomised into the trial; 4 were found to be ineligible. 256 patients had evaluable primary end point data.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer

Blinding implementation details:

Celecoxib/Placebo Treatment Packs were pre-packaged and delivered to site pharmacies. They contained emergency unblinding information in the form of codebreak envelopes kept by the site pharmacies for availability 24 hours per day. Trial monitors checked these envelopes during monitoring visits.

Arms

Are arms mutually exclusive?	Yes
Arm title	Exemestane + Placebo

Arm description:

Patients who received Exemastane and Placebo.

Arm type	Placebo
Investigational medicinal product name	celecoxib placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

two placebo capsules twice daily

Investigational medicinal product name	Exemestane
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

25mg tablet once daily

Arm title	Letrozole + Placebo
------------------	---------------------

Arm description:

Patients who received Letrozole and Placebo

Arm type	Placebo
----------	---------

Investigational medicinal product name	celecoxib placebo

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 January 2007	<p>Exclusion Criteria (section 6.2, page 22): the word 'invasive' has been added to the third exclusion criteria to clearly specify 'invasive breast cancer'</p> <p>Treatment Details (section 8.1, page 24): clarification has been made to explain until when patients should continue their trial treatment (also mentioned on page 28)</p> <p>Two stratification variables have been removed (page 23): 'clinical nodal involvement' and 'participation in translation sub protocol'</p> <p>Schedule of Assessments (section 9, page 26): updated to make clearer when samples are required</p> <p>Pharmacy/drug distribution contact details (throughout the protocol) have been modified to direct the reader to refer to the trial-specific Investigator Site Files for detailed information</p> <p>Trial management/data collection section (section 10, page 29): minor modifications have been made to reflect updates in CRFs required</p> <p>Administrative changes have been made throughout eg. replacing 'Centre' by 'Site', replacing/removing the abbreviation CRCTU and updating contact details where applicable</p>
21 June 2007	Changes to Clinical Trial agreement
25 September 2009	<ul style="list-style-type: none">• TRANS Neo-excel sub-study has been made optional, removing the requirement for tissue and blood sample collection and the additional 14 day biopsy. A new version of the PIS and ICF (Version A) has been created for use at sites that choose not to participate in this optional sub-study.• The existing PIS and ICF (Version B) have been simplified, although the basic information regarding the trial remains the same, so the intent is not to re-consent patients for this study.• The Breast Biopsy- PIS and Pathology ICF have been amended and renamed and are now called the PIS - Donating Tissue for Research and Research Tissue ICF respectively.• An optional PIS has been created which provides a very brief and simple summary about the trial, which sites can choose to give to patients prior to the PIS.• Statistical analysis and sample size sections have been rewritten to indicate that a meaningful analysis can be preformed between the celecoxib and placebo arms if only 434 patients are recruited.• Additional instructions regarding unbinding outside of office hours.• Section 15.2 patient confidentiality has been reworded in line with CRCTU procedures and also to indicates that from now on patient's signed and dated ICFs will be returned to the CRCTU. The PIS and consent has also been updated to include this information.• Appendix 3 has been updated with the 1996 version of the Declaration of Helsinki as specified by The Medicines for Human Use (Clinical Trials) Regulations 2004.• PIS, ICF, GP letter have been removed from appendix 7-11 and separate documents have been created.• In eligibility criteria, the breast tumour size now includes postmenopausal women with ER positive tumours ≥ 2 cm. Also tumours must be measured clinically as ≥ 2cm and not measured on ultrasound.• Changes to the definition of serious adverse event to bring it in line with current CRCTU definitions.

01 February 2010	<p>Sample size reduced from 1000 to 256 subjects</p> <p>Changes to trial objectives. New objective is to whether the activity of aromatase inhibitors as primary neo-adjuvant endocrine therapy for early stage ER positive breast cancer in postmenopausal women may be enhanced by the addition of the selective COX 2 inhibitor celecoxib.</p> <p>Changes to trial design and statistical analysis. Prospective phase III, multicentre, randomised clinical trial, with placebo-controlled comparisons.</p>
10 September 2010	<p>The recruitment target has been reduced to 256 patients. The statistical analysis and sample size sections of the protocol have been rewritten to highlight this change. Other major changes to the protocol include:</p> <ul style="list-style-type: none"> • Modification to the RECIST criteria. The RECIST is irrelevant to the trial as we are not reviewing target lesions and non-target lesions. • Introduction of Patient Contact Cards, which will be given to all patients randomised into the trial on which the patient trial number, allocated treatment and contact details for emergency unblinding will be recorded.
24 February 2012	<p>In summary, the duration of treatment period (16 weeks) has been clarified throughout the protocol. In addition, Patient Information Sheets (A and B) and Informed Consent Forms (A and B) have also been amended to include subheadings "excludes Trans NEO-EXCEL sub-study" and "includes Trans NEO-EXCEL sub-study" to further clarify their separate uses within NEO-EXCEL study. Other major changes to the protocol include:</p> <ul style="list-style-type: none"> • Changes to the Randomisation telephone and fax number • Changes to the SAE Reporting fax number • Unit for creatinine measurement corrected to $\mu\text{mol/l}$ • Recruitment target amended from 1000 to 256 patients on Patient Information Sheet A and B • Changes in Principal Investigator at two sites: <ul style="list-style-type: none"> o Dr Tahir Farooq has taken over the role of Principal Investigator instead of Dr Alan Jewkes at Good Hope Hospital o Mr Simon Smith has taken over the role of Principal Investigator instead of Prof Paul Sauven at Broomfield Hospital (formerly known as Chelmsford and Essex County Hospital) <p>We would also like to extend the recruitment period for this trial to 1 May 2014 and therefore the duration of the ethical approval for this trial from 1 May 2012 to 1 May 2019, which includes an extended recruitment phase and 5 years follow-up.</p>

10 April 2013	<p>In summary, due to the current Celecoxib/placebo stock expiring in the end of October 2013 and the recruitment period continuing until May 2014, we require a new stock of Celecoxib/placebo treatment packs. The current stock of Celecoxib is of 400mg strength but it is only possible to purchase 200mg strength for the new stock. Therefore the following changes have been made:</p> <ul style="list-style-type: none"> • Protocol <ul style="list-style-type: none"> o Change from "celecoxib 400mg, one capsule twice daily" to "celecoxib 200mg, two capsules twice daily". o The drug distribution company has changed its name to Sharp Clinical Services. • GP Letter <ul style="list-style-type: none"> o Change from "Celecoxib 400mg bd" to "Celecoxib 2 x 200mg bd". <p>In addition the following changes will occur:</p> <ul style="list-style-type: none"> • Addition of four new sites: <ul style="list-style-type: none"> o Dr Karen McAdam will be the Principal Investigator at Peterborough City Hospital. o Mr Jibril Jibril will be the Principal Investigator at Lincoln County Hospital, Grantham and District Hospital, and Pilgrim Hospital. • Changes in Principle Investigator at one site: <ul style="list-style-type: none"> o Dr Diane Ritchie has taken over the role of Principal Investigator instead of Dr Peter Canney at Beatson West of Scotland Cancer Centre. • Protocol: <ul style="list-style-type: none"> o Dr Susanna Kallioinen has taken over from Dr Jaspreet Babrah as the Trial Co-ordinator. o Mrs Cassandra Brookes has taken over from Dr Laura Buckley as the Statistician.
05 May 2014	Change in principal Investigator
30 November 2017	Changes to end of trial definition, Chief Investigator and Trial Management Group

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.
