

Clinical trial results:

A Randomized Phase II Study of Two Chemotherapy Regimens, Pemetrexed-Carboplatin, and Gemcitabine-Vinorelbine, in Anthracycline and Taxanes Pretreated Advanced Breast Cancer Patients

Summary

EudraCT number	2006-000441-19
Trial protocol	DE ES IT
Global end of trial date	27 August 2010

Results information

Result version number	v1 (current)
This version publication date	15 April 2016
First version publication date	15 April 2016

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 August 2010
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 August 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary purpose of this study is to help answer the following research questions:

- whether the chemotherapy combination therapy Pemetrexed-Carboplatin or Gemcitabine-Vinorelbine can help participants with advanced breast cancer to make the tumor smaller or disappear and for how long
- to learn more about the side effects in each chemotherapy combination treatment arm
- to assess how participants with advanced breast cancer report health changes while receiving any of the chemotherapy combination arm

Protection of trial subjects:

This study was conducted in accordance with International Code of Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 June 2006
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 36
Country: Number of subjects enrolled	Germany: 21
Country: Number of subjects enrolled	Italy: 30
Country: Number of subjects enrolled	Israel: 18
Country: Number of subjects enrolled	Switzerland: 9
Country: Number of subjects enrolled	Turkey: 8
Country: Number of subjects enrolled	South Africa: 13
Worldwide total number of subjects	135
EEA total number of subjects	87

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	115
From 65 to 84 years	20
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Not Applicable

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Pemetrexed/Carboplatin

Arm description:

Pemetrexed 600 milligram per meter squared (mg/m^2) was administered intravenously over approximately 10 minutes on Day 1. Carboplatin was given over approximately 30 minutes on Day 1 beginning after the end of the Pemetrexed infusion, consistent with a target of AUC 5.0 milligram/minute/milliliter ($\text{mg}\cdot\text{min}/\text{mL}$). The cycle of treatment was 21 days

Arm type	Experimental
Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	LY231514, Alimta
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Pemetrexed $600 \text{ mg}/\text{m}^2$, administered intravenously (IV) every 21 days until disease progression or unacceptable toxicity.

Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Carboplatin was given over approximately 30 minutes on Day 1 beginning after the end of the Pemetrexed infusion, consistent with a target of AUC $5.0 \text{ mg}\cdot\text{min}/\text{mL}$. The cycle of treatment was 21 days until disease progression or unacceptable toxicity.

Arm title	Gemcitabine/Vinorelbine
------------------	-------------------------

Arm description:

Vinorelbine $30 \text{ mg}/\text{m}^2$ was given over approximately 6-10 minutes on Day 1 and Day 8.

Gemcitabine $1200 \text{ mg}/\text{m}^2$ was given over approximately 30 minutes on Day 1 and Day 8 beginning after the end of the Vinorelbine infusion. The cycle of treatment was 21 days.

Arm type	Active comparator
Investigational medicinal product name	Vinorelbine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

30 mg/m² vinorelbine administered IV on day 1 and day 8 every 21 days until disease progression or unacceptable toxicity.

Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	LY188011, Gemzar
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

1200 mg/m² gemcitabine, administered IV on day 1 and day 8 every 21 days until disease progression or unacceptable toxicity.

Number of subjects in period 1	Pemetrexed/Carboplatin	Gemcitabine/Vinorelbine
Started	69	66
Received at Least 1 Dose of Study Drug	65	66

Eastern Cooperative Oncology Group (ECOG) Performance Status			
--	--	--	--

The Eastern Cooperative Oncology Group (ECOG) scales and criteria are used by doctors to assess disease progression, assess the patient's living ability, and determine prognosis. The scale is as follows:

0-Fully active, able to carry on all pre-disease performance without restriction. 1-Restricted in activity but ambulatory and able to perform sedentary work. 2-Ambulatory but unable to work. Up and about > 50% of waking hours. 3-Capable of only limited selfcare, confined to bed or chair > 50% of waking hours. 4-Completely disabled. Cannot self care. Totally confined to bed or chair. 5-Dead.			
Units: Subjects			
ECOG 0	39	39	78
ECOG 1	28	27	55
ECOG 2	2	0	2
Hormonal Receptor Status			
Hormone receptor status is a positive or negative measure of estrogen (ER) or progesterone (PR) hormone receptors found in cancer cells. In hormone receptor negative tumors, estrogen and/or progesterone are not present in cancer cells. In hormone receptor positive tumors, estrogen and/or progesterone hormone receptors are present in the cancer cells.			
Units: Subjects			
Estrogen and Progesterone Negative	19	21	40
Estrogen and/or Progesterone Positive	49	44	93
Unknown	1	1	2
Human Epidermal Growth Factor Receptor 2 (HER-2/Neu)			
The Human Epidermal Growth Factor Receptor 2 plays an important role in cell growth and development. HER-2/Neu status is determined by an assay. A positive HER-2/Neu result indicates that HER-2 gene receptors are present; negative HER-2/Neu indicates the absence of HER-2 gene receptors.			
Units: Subjects			
Positive	12	13	25
Negative	53	49	102
Not Performed	0	1	1
Unknown	4	3	7
Tumor Differentiation Grade			
Classification of tumors into one of four grades based upon how similar in appearance the tumor cells are to normal cells, and by how many tumor cells are dividing. The more tumor cells that are dividing, the greater likelihood of tumor growth and the higher the tumor grade. A lower tumor grade is associated with a better prognosis.			
Grade 1 - Well-Differentiated, Low cell division Grade 2 - Moderately Differentiated, Moderate cell division Grade 3 - Poorly Differentiated, High cell division Grade 4 - Undifferentiated, High cell division			
Units: Subjects			
Grade I	6	3	9
Grade II	25	27	52
Grade III	32	30	62
Unknown	6	6	12
Pathological Diagnosis			
This measure is the specific diagnosis of breast cancer based upon pathological diagnosis.			
Units: Subjects			
Carcinoma, Ductal, Breast	64	54	118
Carcinoma, Lobular, Breast	4	5	9
Carcinoma, Inflammatory, Breast	1	3	4
Carcinoma, Mixed Cell, Breast	0	1	1
Other	0	3	3

End points

End points reporting groups

Reporting group title	Pemetrexed/Carboplatin
Reporting group description:	
Pemetrexed 600 milligram per meter squared (mg/m ²) was administered intravenously over approximately 10 minutes on Day 1. Carboplatin was given over approximately 30 minutes on Day 1 beginning after the end of the Pemetrexed infusion, consistent with a target of AUC 5.0 milligram/minute/milliliter (mg*min/mL). The cycle of treatment was 21 days	
Reporting group title	Gemcitabine/Vinorelbine
Reporting group description:	
Vinorelbine 30 mg/m ² was given over approximately 6-10 minutes on Day 1 and Day 8.	
Gemcitabine 1200 mg/m ² was given over approximately 30 minutes on Day 1 and Day 8 beginning after the end of the Vinorelbine infusion. The cycle of treatment was 21 days.	

Primary: Tumor Response Rate

End point title	Tumor Response Rate ^[1]
End point description:	
Participants with best overall response determined from complete response (CR) or partial response (PR) according to Response Criteria in Solid Tumors (RECIST) criteria. For CR or PR, best response must be confirmed. A second assessment performed at 28 days. Two determinations of CR before progression required for rate to=CR. Evaluations include: CR=Disappearance of lesions. PR= $\geq 30\%$ size decrease of lesions. Progressive Disease (PD)= $\geq 20\%$ size increase of lesions. Stable Disease (SD)=Not enough shrinkage for PR nor enough increase for PD. Overall Response Rate=PR+CR/Qualified Participants*100.	
End point type	Primary
End point timeframe:	
Baseline up to 30 days of follow-up after 21 cycles of treatment.	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.	
Justification: There is no statistical analysis for the primary endpoint of Tumor Response Rate. Descriptive statistics are used to represent the tumor response in each treatment arm and reported as percentage of participants with a 95% confidence interval.	

End point values	Pemetrexed/Carboplatin	Gemcitabine/Vinorelbine		
Subject group type	Reporting group	Reporting group

Secondary: Duration of Response (DOR)

End point title	Duration of Response (DOR)
-----------------	----------------------------

End point description:

DOR-RECIST criteria of (Complete Response [CR =Disappearance of lesions] or Partial Response [PR= $\geq 30\%$ size decrease of lesions]) is defined as time from the date when measurement criteria are met for CR or PR until the date of first observation of progressive disease (PD) or death from study disease. For participants who die from causes other than study disease and without PD, DOR will be censored at the date of death. For participants who have not died as of the data cut-off date who are without PD, DOR was censored at last contact date.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 November 2007	Changed inclusion criteria.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
